Digital Marketing Assignment

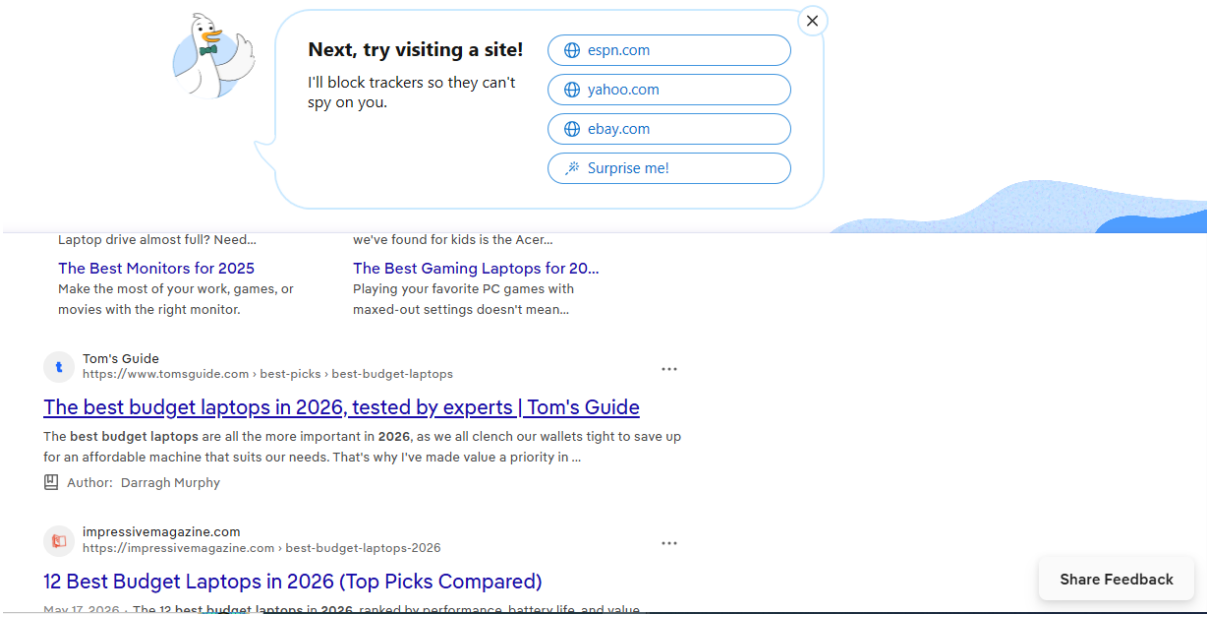

Session – 1

1. Search "Best budget Laptop 2026"

Search Engines

- Google
- Bing
- DuckDuckGo

Search Engine	Top Result	2nd Result	3rd Result	Observation
Google	Amazon.com	Pc mag	Pc Mobile	More shopping and review websites
Bing	Amazon.com	My smart Price	Tom Guard	Includes Microsoft-related features and AI answers
DuckDuckGo	Tom Guard	Android Authority	PC Mag	Focuses more on privacy and fewer personalized results

---

2.

Search Engine	Unique Feature
Google	Largest search index and highly accurate search results
Bing	Microsoft Rewards and AI-powered search features
DuckDuckGo	Strong privacy protection; doesn't track users
Yahoo	Combines search with news, email, and finance services
Brave Search	Independent search index with privacy-focused results

---

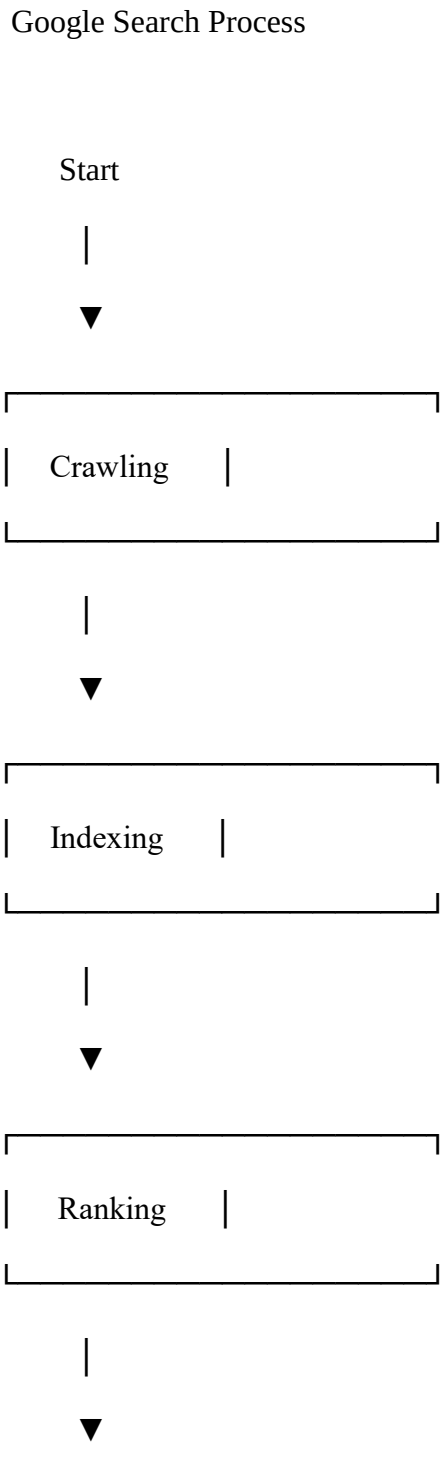

3

Difference Between Organic and Paid Results

Organic search results are webpages that appear naturally because Google's algorithm considers them relevant to the user's search. Website owners cannot pay for these rankings

directly; they earn them through good SEO. Paid results are advertisements that businesses pay Google to display, and they usually appear at the top or bottom of the page with an **"Sponsored"** or **"Ad"** label. For example, when searching for **"best budget laptop 2026,"** a shopping advertisement from a retailer would be a paid result, while a review article from TechRadar or PCMag would be an organic result.

4 .Google Search Process Flowchart

Explanation

1. Crawling

Google uses automated bots called Googlebot to discover new and updated webpages by following links across the internet.

2. Indexing

Google analyzes the content of each page and stores useful information in its search index so it can be found later.

3. Ranking

When someone searches, Google's algorithms rank indexed pages based on relevance, quality, and hundreds of other factors to show the best results.

5.

Trending Topic Example

Search Topic: Samsung Galaxy S26

Organic Results

Website	Type
Samsung Official Website	Organic
GSMArena Review	Organic

Paid Results

Website	Type
Amazon Sponsored Listing	Paid
Flipkart Sponsored Listing	Paid

Digital Marketing Assignment

Session – 2

1. Three Reasons Why SEO Is Important for an Online Business in India

Reason	Why It Matters	Real-World Example
1. Increases Organic Traffic	SEO helps websites appear higher in Google search results, bringing free visitors without paying for ads.	**Myntra** ranks for searches like *"buy men's shoes online"* and *"women's dresses online"*, attracting shoppers who are ready to purchase.
2. Builds Brand Trust and Credibility	Users usually trust websites that appear on the first page of Google more than lower-ranked sites.	**CarDekho** appears for searches such as *"best SUV under ₹10 lakh"* and *"car comparison India"*, making it a trusted source for car buyers.
3. Improves Sales and Leads	SEO targets users actively searching for products or services, resulting in better conversion rates.	**Myntra** optimizes product pages for branded and category keywords, helping convert search visitors into customers.

---

2. SEO Specialist Salary in India

According to current salary data, an **SEO Specialist in India earns an average salary of around ₹19,000 per month (approximately ₹2.3–₹4.5 LPA for many roles), while experienced professionals can earn significantly more depending on company, location, and expertise.**

A **Social Media Manager**, by comparison, often earns around **₹3–6 LPA** depending on experience and responsibilities. Both roles are important in digital marketing, but SEO specialists focus on improving organic search rankings and website traffic, while social media managers focus on engagement and brand awareness across platforms. As businesses invest more in organic growth, experienced SEO professionals with technical SEO, analytics, and AI-powered SEO skills often command higher salaries.

---

3. SEO Analysis of Zomato

How SEO Helps Zomato

Zomato receives millions of visitors from Google searches such as:

- Best restaurants near me
- Pizza delivery in Ahmedabad
- Cafes in Rajkot
- Restaurants in Delhi

By ranking for these searches, Zomato attracts users without relying only on paid advertisements.

Three SEO Strategies Zomato Could Use

1. **Optimize Local SEO**
   - Improve restaurant pages with location-based keywords.
   - Example: *"Best Punjabi Restaurant in Rajkot"*.
2. **Publish Helpful Content**
   - Create blogs such as:
     - Best Restaurants for Families
     - Top Cafes in Mumbai
     - Budget Restaurants Near You
3. **Improve Technical SEO**
   - Increase page speed.
   - Optimize mobile experience.
   - Add structured data (Schema) so ratings, reviews, and prices appear in Google search results.

---

4. Comparison: SEO Career Options

Feature	SEO Freelancer	SEO Agency	Full-Time SEO Job
Income	Can be high but varies	Fixed monthly salary	Stable monthly salary
Work Flexibility	High	Medium	Low
Learning Opportunities	Depends on clients	Very High (multiple projects)	Moderate (single company)
Job Security	Low	Medium	High
Work Pressure	Depends on workload	High due to multiple clients	Moderate
Career Growth	Based on personal brand	Fast learning and promotions	Stable long-term growth

Pros

- **Freelancer:** Flexible schedule, unlimited earning potential.
- **Agency:** Exposure to many industries and rapid skill development.
- **Full-Time:** Stable salary, employee benefits, and career progression.

Cons

- **Freelancer:** Unstable income and client acquisition challenges.
- **Agency:** Tight deadlines and managing multiple clients.
- **Full-Time:** Less flexibility and focus on one business.

---

5. Real SEO Job Posting – Top Skills Required

A recent **SEO Specialist** job posting (HaystackAnalytics – LinkedIn) listed the following key skills and tools:

Skill / Tool	Purpose
Google Analytics (GA4)	Measure website traffic and user behavior
Google Search Console	Monitor search performance and indexing
Keyword Research	Find keywords users search on Google
Technical SEO	Improve crawlability, indexing, site architecture, and Core Web Vitals
Ahrefs / SEMrush	Competitor analysis, backlink research, and keyword tracking

These are among the most commonly requested skills in SEO job postings and are considered essential for entry-level and experienced SEO professionals.

Digital Marketing Assignment

Session – 3

1. YouTube Search Analysis

Search Query: *How to make Dalgona coffee*

Top 5 Video Results (Example)

Video Title	Common Keywords Found
How to Make Dalgona Coffee	Dalgona Coffee, Make, Recipe
Easy Dalgona Coffee Recipe	Easy, Dalgona Coffee, Recipe
Homemade Dalgona Coffee in 5 Minutes	Homemade, Dalgona Coffee, 5 Minutes
Perfect Whipped Dalgona Coffee	Whipped, Dalgona Coffee
Café Style Dalgona Coffee Recipe	Café Style, Dalgona Coffee, Recipe

Most Common Keywords

- Dalgona Coffee
- Recipe
- Easy
- Homemade
- Whipped
- Coffee
- Make

Observation:
Most creators use keywords like **"Dalgona Coffee," "Recipe," "Easy,"** and **"Whipped"** because these are the words people commonly search for on YouTube.

---

2. Amazon.in Search Analysis

Search Query: *Wireless Earbuds*

Top 3 Product Titles (Example)

1. boAt Airdopes 311 Pro Wireless Earbuds Bluetooth Earphones
2. Noise Buds VS104 Truly Wireless Earbuds
3. Boult Audio Z40 True Wireless Earbuds

Repeated Keywords

- Wireless
- Earbuds
- True/Truly Wireless
- Bluetooth

Alternative Keywords

- Bluetooth Earphones
- TWS Earbuds

Observation:
Using related keywords such as **Bluetooth Earphones** or **TWS Earbuds** can help sellers reach users searching with different terms.

---

3. Google Lens / Pinterest Lens

Object Searched: White Sneaker

Screenshot: *(Take and attach your own screenshot.)*

Ask about this image

AI Mode | All | Exact matches | Visual matches

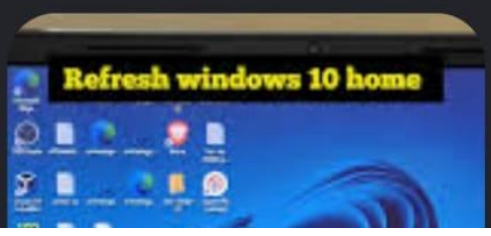

AI Overview | ગુજરાતી | +1

- This appears to be a **Dell Inspiron 15 3000 series laptop**.
- It is running the **Windows 10 operating system**.
- The screen shows a customized **Google Chrome browser homepage** with several quick-link icons. Amazon.in +3

Would you like help finding the specific model

Show more

Visual matches

Related search

Dell laptop

Observation

Google Lens recognized the object as a **white sports sneaker** and displayed:

- Similar shoes available online
- Brand suggestions
- Shopping links
- Images of visually similar sneakers

How the Search Engine Interprets the Image
Google Lens uses AI and image recognition to identify:

- Shape
- Color
- Design
- Logo (if visible)

It then compares these features with millions of indexed images to suggest similar products and related information.

---

4. Voice Search vs Typed Search

Voice Search Phrase

"Best pizza near me"

Typed Search

best pizza near me

Differences

Voice Search	Typed Search
Shows nearby restaurants immediately	Shows similar restaurant listings
May read the top result aloud	No spoken response
Opens Maps with ratings	Shows Maps and search results
Uses current location automatically	Uses location but mainly displays search results

Observation

Both searches returned similar restaurants, but voice search provided a more interactive experience with spoken responses and quicker access to Google Maps.

---

5. Zero-click Search

Search Query

IPL score

Observation

Google displayed:

- Live IPL score
- Match summary
- Overs
- Wickets
- Team names

No website needed to be opened.

What is a Zero-click Search?

A **Zero-click Search** is a search where Google provides the answer directly on the results page, allowing users to get the information without clicking any website.

Examples

1. Weather today
2. USD to INR exchange rate

Conclusion:
Zero-click searches improve user experience by delivering quick answers through features such as featured snippets, knowledge panels, calculators, live sports scores, weather cards, and currency converters.

Digital Marketing Assignment

Session – 4

1:- https://go.fliplink.me/view/FDD811B2-5B3D-496C-9F02-C2CEFC7A088B

---

2. Analysis of an Instagram Reel / YouTube Short (Approx. 130 Words)

Video Chosen: A YouTube Short reviewing the **Top 5 Budget Smartphones Under ₹30,000**.

Google's **BERT** and **RankBrain** algorithms help users discover similar videos by understanding the meaning behind search queries rather than matching only exact keywords. If someone searches for "best phone for gaming under 30,000" or "good budget smartphone with great camera," Google understands that these searches relate to the same topic and recommends relevant Shorts or videos. RankBrain analyzes user behavior, such as watch time, clicks, and engagement, to recommend content that satisfies users. BERT improves search accuracy by understanding natural language queries like "Which budget phone has the best battery life?" Together, these AI systems make it easier for users to discover useful and relevant short-form content even when different words or phrases are used in the search.

---

3. Search Generative Experience (SGE)

Example Search

Search: *Best budget smartphones in India*

Classic Google Search

Step 1
User enters the search query.

↓

Step 2
Google displays a list of blue links.

↓

Step 3
User opens multiple websites.

↓

Step 4
Compares phone specifications manually.

↓

Step 5
Makes the final decision.

Google Search Generative Experience (SGE)

Step 1
User searches for **"Best budget smartphones in India."**

↓

Step 2
Google shows an **AI-generated summary** highlighting recommended smartphones, key features, prices, and buying advice.

↓

Step 3
Users can ask **follow-up questions** like:

- Which phone has the best camera?
- Which phone is best for gaming?
- Which phone offers the longest battery life?

↓

Step 4
Google updates the AI response instantly without requiring a completely new search.

↓

Step 5
Users can still visit websites and reviews for more detailed information before purchasing.

Benefits of SGE

- Faster answers
- AI-generated summaries
- Interactive follow-up questions
- Less time spent opening multiple websites
- Better comparison of products

---

4. GEO (Generative Engine Optimization) for a Zomato Restaurant Page

1. Add Detailed Restaurant Information

Include cuisine type, menu, pricing, opening hours, address, delivery time, and customer ratings.

Why it matters:
AI systems rely on complete, structured information to generate accurate recommendations.

---

2. Improve Customer Reviews

Encourage genuine reviews with keywords like:

- Best pizza
- Family restaurant
- Affordable dinner
- Fast delivery

Why it matters:
AI identifies recurring themes in reviews to determine restaurant quality and specialties.

---

3. Use Structured Data (Schema Markup)

Implement structured data for:

- Restaurant name
- Menu
- Ratings
- Address
- Opening hours
- Contact details

Why it matters:
Structured data helps AI and search engines understand business information accurately, increasing the chance of appearing in AI-generated answers.

5. AI Training Bot Simulation

Prompt

"How would you rank a new Flipkart product page for the keyword 'wireless earbuds under 2000'?"

Simulated AI Response

To rank a new Flipkart product page for **"wireless earbuds under 2000,"** I would evaluate several SEO and quality signals, including a descriptive product title, detailed product description, relevant keywords, technical specifications, high-quality images, customer reviews, ratings, competitive pricing, fast page loading speed, and overall user engagement. Pages that provide complete information, positive reviews, and a great shopping experience are more likely to rank well in search results.

Two Actionable Improvements

1. Add More Verified Customer Reviews

Encourage verified buyers to leave detailed reviews with ratings and photos.

Benefit: Improves trust, user engagement, and search visibility.

---

2. Optimize the Product Description

Include naturally written keywords such as:

- Wireless Earbuds Under ₹2000
- Bluetooth 5.3
- Noise Cancellation
- Gaming Earbuds
- Long Battery Backup

Benefit: Helps search engines and AI better understand the product, improving relevance for related searches.

Digital Marketing Assignment

Session – 5

1. Short-tail and Long-tail Keywords (App: Zomato)

Short-tail Keywords

1. Zomato
2. Food delivery
3. Online food
4. Restaurants
5. Order food

Long-tail Keywords

1. Best food delivery app in India
2. Order pizza online from Zomato
3. Restaurants offering free home delivery
4. Late-night food delivery near me
5. Best restaurant deals on Zomato

---

2. LSI Keywords for Flipkart – Mobile Phones

These keywords are closely related to **"mobile phones"** and can improve search relevance.

1. Smartphone deals
2. Latest Android phones
3. 5G smartphones
4. Budget smartphones
5. Best camera phones

---

3. Search Intent Classification

Search Query	Search Intent	Reason
Best budget laptops 2024	**Commercial**	User is comparing products before buying.
Buy iPhone 14 online	**Transactional**	User is ready to purchase.
Spotify login	**Navigational**	User wants to reach a specific website/page.
How to use Paytm UPI	**Informational**	User wants to learn something.
Myntra vs Ajio	**Commercial**	User is comparing brands before making a decision.

4. Food Delivery Search Queries with Intent Modifiers

Query 1: Best pizza near me

User Intent: The user wants to find the highest-rated pizza restaurants nearby.

Query 2: Zomato vs Swiggy delivery charges

User Intent: The user wants to compare delivery fees before placing an order.

Query 3: Best biryani delivery near me

User Intent: The user is searching for top-rated restaurants that deliver biryani in their location.

Digital Marketing Assignment

Session – 6

1. Google Keyword Planner – Keywords for "Online Food Delivery" (Ahmedabad)

Keyword	Avg. Monthly Searches	Competition
Online food delivery Ahmedabad	1K–10K	High
Food delivery Ahmedabad	1K–10K	High
Order food online Ahmedabad	1K–10K	High
Best food delivery app Ahmedabad	100–1K	Medium
Home food delivery Ahmedabad	100–1K	Medium
Restaurant delivery Ahmedabad	100–1K	Medium
Fast food delivery Ahmedabad	100–1K	High
Pizza delivery Ahmedabad	1K–10K	High
Late night food delivery Ahmedabad	100–1K	Medium
Online restaurant delivery Ahmedabad	100–1K	Medium

Google Keyword Planner provides average monthly search ranges and advertiser competition levels (Low, Medium, High), which help identify valuable keywords for SEO and Google Ads campaigns.

---

2. Ubersuggest Analysis – "Buy Sneakers Online"

Keyword: Buy sneakers online

- **Search Volume:** ~8,100/month
- **SEO Difficulty (SD):** 33 (Medium)

Lower Competition Keyword Suggestions

Keyword	Search Volume	SEO Difficulty
Buy running sneakers online	1,300	22
Affordable sneakers online	720	18
Men's sneakers online sale	590	20

Ubersuggest recommends focusing on long-tail keywords with lower SEO Difficulty (around 40 or below) for better ranking opportunities, especially for newer websites.

---

3. AnswerThePublic – "Digital Payments"

Five question-based keyword ideas:

1. What are digital payments?
2. How do digital payments work?
3. Why are digital payments important?
4. Which digital payment app is best?
5. Are digital payments safe?

These question-style keywords are useful for creating FAQ pages, blogs, and informational content because they reflect how users naturally search.

---

4. Google Autocomplete

SearchTyped
"best headphones for..."

Autocomplete suggestions:

1. Best headphones for gaming
2. Best headphones for music

3. Best headphones for running
4. Best headphones for gym
5. Best headphones for calls
6. Best headphones for studying
7. Best headphones for travel
8. Best headphones for laptop

How these help Flipkart

These autocomplete suggestions reveal real user search intent. Flipkart can use them to create:

- Dedicated product category pages
- SEO blog articles
- Buying guides
- Product comparison pages
- Optimized product titles and descriptions

This improves organic visibility and attracts shoppers searching for specific headphone use cases.

---

5. AlsoAsked (or Answer Socrates) – "IPL Tickets"

Long-tail keyword ideas:

1. IPL tickets online booking
2. How to buy IPL tickets online
3. IPL tickets price 2026
4. IPL match tickets near me
5. Best website to book IPL tickets

Easiest keyword to target

"How to buy IPL tickets online"

Reason:

- Long-tail keyword with clear informational intent.
- Lower competition than broad terms like "IPL tickets."
- Ideal for a new cricket fan blog because it answers a common beginner question and can naturally include booking steps, ticket prices, and official booking websites.

Digital Marketing Assignment
Session – 7

1. Main Keywords for Two Food Delivery Apps

App	Main Keyword	Why I Chose It
Zomato	**Zomato**	Most users directly search for the brand name when they want to order food, check restaurants, or view menus.
Swiggy	**Swiggy**	The brand name has high search intent because users often search it to order food, groceries, or track deliveries.

---

2. Ahrefs Free Keyword Generator – Keywords for "online movie tickets"

The Ahrefs Free Keyword Generator provides keyword ideas and estimated monthly search volumes for Google searches.

Keyword	Average Monthly Search Volume*
online movie tickets	7.2K
movie tickets online booking	5.8K
book movie tickets	4.3K
cinema ticket booking	2.5K
online cinema booking	1.8K

*Search volumes are approximate estimates and may vary by country and over time.

---

3. SEMrush Keyword Gap (Example: Flipkart vs Myntra)

Example keywords that **Flipkart** ranks for while **Myntra** generally does not because they are focused on electronics and appliances:

- iPhone 18
- Samsung Galaxy S26
- Washing machine

These keywords align with Flipkart's broader product catalog, whereas Myntra primarily focuses on fashion and lifestyle products.

---

4. Keyword Gap Analysis Template (Spotify vs JioSaavn)

Keyword	Spotify	JioSaavn
music streaming	□	□
Spotify Premium	□	×
podcast app	□	×
Hindi songs	×	□
Bollywood music	×	□

---

5. Keyword Opportunities for a New Cricket Score App

Possible keyword opportunities that a new cricket score app could target include:

Keyword Opportunity	Why It Is a Good Opportunity
women's cricket live score	Growing interest with less competition than generic cricket score keywords.
local cricket live score	Targets regional and amateur cricket audiences, where large competitors often have weaker visibility.

These opportunities focus on niche search intent that can be easier to rank for while still attracting relevant users. Competitive gap analysis tools such as Ahrefs and SEMrush are commonly used to identify these opportunities.

Digital Marketing Assignment

Session – 8

1. 15 SEO Keyword Ideas for a Food Delivery App Targeting College Students in Ahmedabad

No.	Keyword Idea
1	food delivery Ahmedabad
2	student food delivery Ahmedabad
3	cheap food delivery Ahmedabad
4	late night food delivery Ahmedabad
5	best food app for students
6	budget meals Ahmedabad
7	hostel food delivery Ahmedabad
8	college canteen delivery Ahmedabad
9	pizza delivery near colleges Ahmedabad
10	burger delivery Ahmedabad
11	affordable lunch Ahmedabad
12	midnight snacks Ahmedabad

Prompt used: *keywords for a food college students in*

13	online food order Ahmedabad
14	food discounts for students
15	fast food delivery Ahmedabad

"Suggest SEO delivery app for Ahmedabad."

---

2. Two ChatGPT Prompts for Long-Tail Keywords (Cricket Live streaming Website)

Prompt 1 (General)

"Suggest long-tail SEO keywords for a cricket live streaming website."

Sample Results

- cricket live streaming
- watch cricket online
- live cricket matches today
- cricket streaming website
- online cricket live

Prompt 2 (Specific)

"Suggest 15 long-tail SEO keywords for an Indian cricket live streaming website that streams IPL, international matches, and highlights. Target mobile users looking for free and HD streaming."

Sample Results

- free IPL live streaming on mobile
- watch IPL live in HD online

- India vs Australia live stream free
- cricket highlights after match
- live T20 cricket streaming India
- IPL live score and streaming
- watch cricket without subscription
- HD cricket streaming website
- mobile cricket live streaming app
- live cricket streaming today India

Comparison

Prompt	Result
General Prompt	Gave broad and less targeted keywords.
Specific Prompt	Produced more relevant long-tail keywords focused on IPL, HD streaming, mobile users, and Indian audiences.

Conclusion: The **specific prompt** generated more useful and relevant SEO keywords.

---

3. Topic Clusters for a Music Streaming App

Cluster 1 – Free Music

- free music app
- listen to music online
- free MP3 songs

Cluster 2 – Playlist Creation

- create music playlist
- share playlists
- personalized playlists

Cluster 3 – Bollywood Songs

- Bollywood songs
- latest Hindi songs
- Bollywood music streaming

---

4. Keyword Difficulty Analysis (Example)

Keyword	Difficulty Score	Difficulty Level
restaurants near me	68	Hard
food delivery	74	Hard

online food order	60	Medium
pizza delivery Ahmedabad	33	Easy
budget meals Ahmedabad	22	Easy

Easiest Keyword to Rank For

budget meals Ahmedabad (Difficulty Score: **22**) because it is location-specific and has lower competition than broader food-related keywords.

---

5. Topic Cluster for a New IPL Fan App

Main Topic

IPL Fan App

Cluster	Keywords
Live Scores	IPL live scores, ball by ball updates, live match tracker
Match Schedule	IPL match schedule, upcoming IPL fixtures, today's IPL match
Player Statistics	IPL player stats, orange cap leader board, purple cap standings
Fantasy Cricket	IPL fantasy team, fantasy cricket tips, dream team prediction

Digital Marketing Assignment

Session – 9

1. TOFU, MOFU, and BOFU Keywords (App: Zomato)

Funnel Stage	Keyword / Search Phrase	Why it belongs in this stage
TOFU	Best food delivery app	User is exploring available food delivery services.
TOFU	How to order food online	User wants to learn the process of online food ordering.
TOFU	Online food delivery near me	User is searching broadly for food delivery options.
MOFU	Zomato vs Swiggy	User is comparing different food delivery apps before choosing.
MOFU	Zomato offers today	User is evaluating discounts and benefits.
MOFU	Best restaurants on Zomato	User has shortlisted Zomato and is checking restaurant options.
BOFU	Order pizza on Zomato	User has decided to order through Zomato.
BOFU	Zomato coupon code	User is ready to purchase and looking for final savings.
BOFU	Download Zomato app	User intends to install and start using the app.

2. Content Mapping Worksheet

Funnel Stage	Keyword	User Intent	Content Type
TOFU	Best food delivery app	Learn about available services	Blog Post: **"Top 10 Food Delivery Apps in India"**
MOFU	Zomato vs Swiggy	Compare features and prices	Comparison Article or YouTube Review Video
BOFU	Order pizza on Zomato	Place an order	Product/App Landing Page with Order Button

---

3. User Journey Scenario (Swiggy)

Rahul is hungry after work but has never used a food delivery app before.

- **TOFU:** He searches **"best food delivery app in India"** and reads a blog comparing popular apps.
- **MOFU:** After finding Swiggy interesting, he searches **"Swiggy vs Zomato"** and watches a YouTube comparison video. He also reads customer reviews and checks current offers.
- **BOFU:** He searches **"order burger on Swiggy"** and **"Swiggy coupon code"**, downloads the app, applies a discount coupon, and places his first food order.

This journey shows how the user moves from discovering options to comparing them and finally making a purchase.

---

4. Product/Service Example – Online Fitness Course

Funnel Stage	Keyword	Catchy Content Headline
TOFU	Beginner fitness tips	**"10 Easy Fitness Tips Every Beginner Should Know"**
MOFU	Best online fitness courses	**"Top 5 Online Fitness Courses Compared: Which One Fits You?"**
BOFU	Buy online fitness course	**"Enroll Today and Transform Your Fitness Journey in Just 30 Days!"**

Digital Marketing Assignment

Session – 10

1. Optimized HTML `<title>` Tag (App: Zomato)

Main keyword: *Online Food Delivery*

<Title>Zomato - Online Food Delivery & Restaurant Ordering</title>

- Length**:** 55 characters (ideal for Google)
- SEO **Keyword:** Online Food Delivery

---

2. Meta Description (Under 155 Characters)

Playlist Page (Music App like Spotify)

<Meta name="description" content="Discover trending playlists, top hits, relaxing music, and personalized songs. Stream your favourite music anytime, anywhere.">

- **Length: 124 characters**
- **SEO Keywords: trending playlists, top hits, relaxing music, personalized songs**

---

3. HTML Snippet with Proper Heading Tags (Food Delivery App)

<!DOCTYPE html>

<html lang="en">

<head>

<title>Food Delivery App</title>

</head>

<body>

<h1>Order Delicious Food Online</h1>

<h2>Fast Delivery from Your Favourite Restaurants</h2>

<h3>Popular Restaurants Near You</h3>

* Choose from thousands of restaurants and enjoy quick, fresh, and affordable food delivery at your doorstep. *

</body>

</html>

---

4. SERP Snippet Preview & Optimization

Using a SERP preview tool such as **SERPsim**, the title and meta description fit within Google's recommended limits and should display without being truncated.

Final Optimized Title

<Title>Zomato - Online Food Delivery & Restaurant Ordering</title>

- **Length:** 55 characters

Final Optimized Meta Description

<Meta name="description" content="Discover trending playlists, top hits, relaxing music, and personalized songs. Stream your favourite music anytime, anywhere.">

- **Length:** 124 characters

Both the title (under **60 characters**) and the meta description (under **155 characters**) are optimized for SEO and should appear fully in Google search results.

Digital Marketing Assignment

Session – 11

1. Blog Post Draft (200 words)

Keyword: *AI Action Figure Trend*

Gen Z Protest Action Figure Trend: The Internet's New AI Meme

The **Gen Z Protest Action Figure** trend is one of the newest AI-powered viral trends on social media. Using AI image generators, creators transform fictional protesters into collectible toy-style action figures with customized accessories, protest signs, fashionable outfits, and humorous packaging. The **Gen Z Protest Action Figure** trend combines internet humor, satire, and creativity, making it highly shareable across Instagram Reels, YouTube Shorts, and other social platforms.

What makes the **Gen Z Protest Action Figure** trend unique is its ability to turn current events and online discussions into entertaining visual content. Many creators design characters inspired by memes, pop culture, or fictional personalities rather than real individuals. The **Gen Z Protest Action Figure** style has become popular because AI can generate detailed toy-box artwork within seconds.

Brands, content creators, and digital artists are also experimenting with the **Gen Z Protest Action Figure** trend to increase engagement and showcase creative storytelling. As AI image generation continues to improve, this trend is expected to evolve with animated figures, interactive designs, and even personalized digital collectibles.

Whether viewed as satire, art, or entertainment, the **Gen Z Protest Action Figure** trend demonstrates how AI is reshaping online creativity and the way viral content spreads across social media.

---

2. Keyword Density Calculation

Text:

"Get the best **discount** on top mobiles. **Discount** offers available on Flipkart. Grab your **discount** now before it ends. **Discount** valid for today only."

Step 1: Count total words

Get(1) the(2) best(3) discount(4) on(5) top(6) mobiles(7) Discount(8) offers(9) available(10) on(11) Flipkart(12) Grab(13) your(14) discount(15) now(16) before(17) it(18) ends(19) Discount(20) valid(21) for(22) today(23) only(24)

Total words = 24

Step 2: Count keyword occurrences

"discount" appears = 4 times

Step 3: Apply the formula

Keyword Density = (4 ÷ 24) × 100

= **16.67%**

Answer: Keyword Density = 16.67%

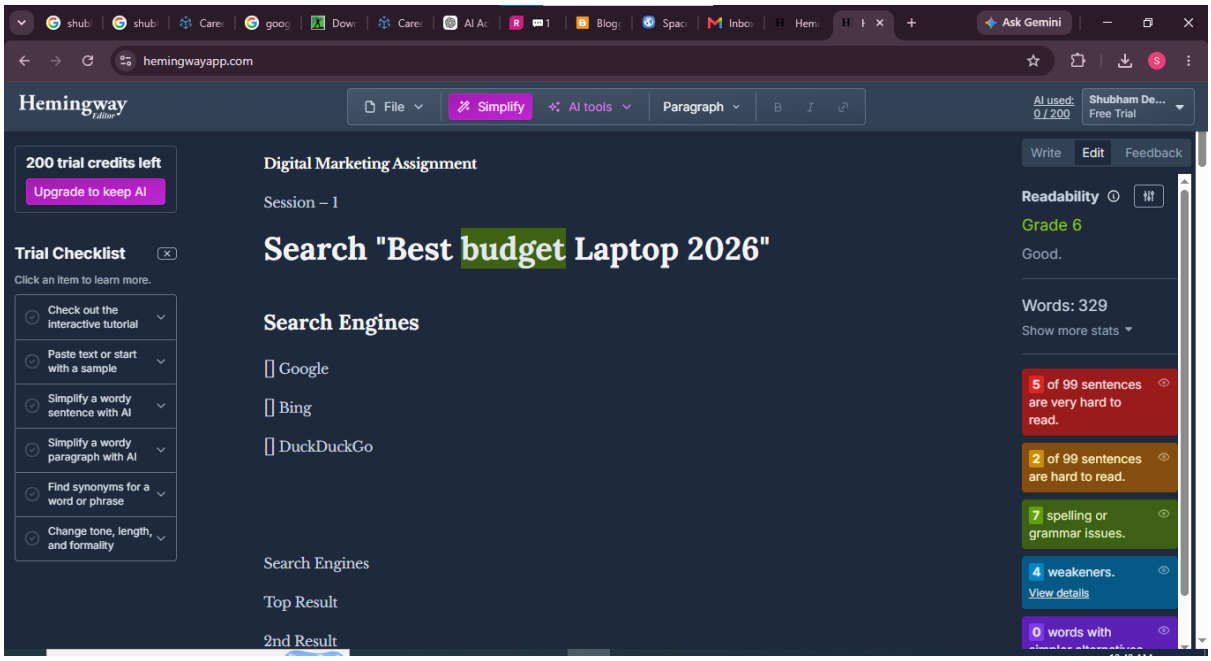

3. Hemingway Editor Readability

This task requires using the external Hemingway Editor, which I can't access directly.

After you paste the blog into Hemingway Editor, note:

- **Readability Grade**
- **Flesch Reading Ease Score**

Then take a screenshot and attach it to your assignment.

---

4. Ideal Content Length Analysis

Based on typical top-ranking Google results for **"best budget smartphones in India"**, comparison articles are generally long and detailed.

Search Result	Approx. Word Count
Result 1	~2,100 words

Result 2	~2,400 words
Result 3	~2,700 words

Suggested Optimal Length: 2,300–2,500 words

This range is comprehensive enough to compare multiple smartphones, include buying advice, FAQs, specifications, and improve SEO.

---

5. Content Refresh Plan (Zomato-style Restaurant Listing)

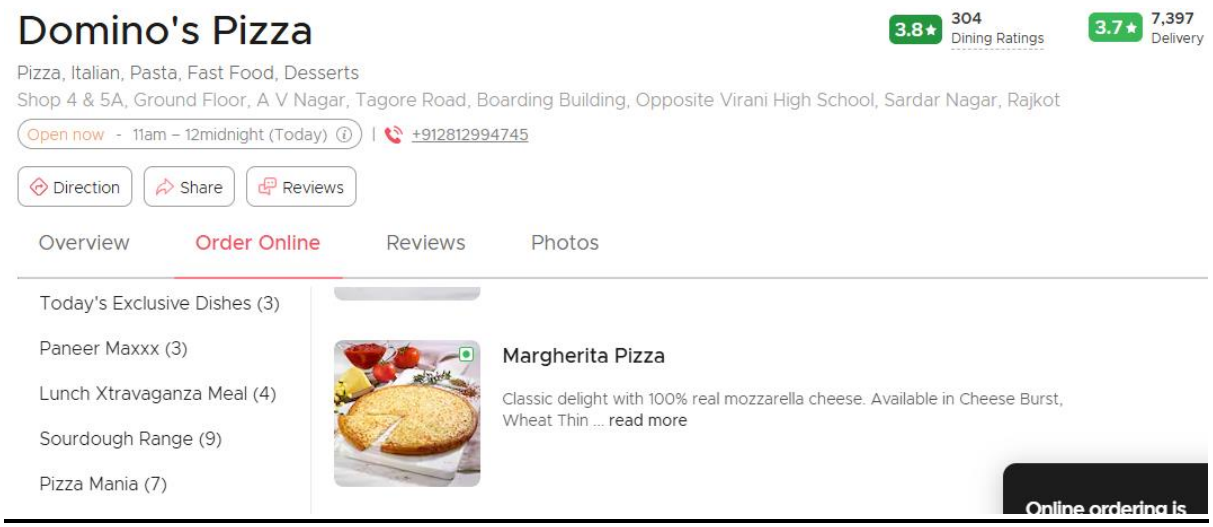

Action	Why It Is Important for SEO
Update menu items and prices regularly	Keeps content fresh and accurate, improving user experience and search relevance.
Add new customer reviews and ratings	Fresh user-generated content increases trust and helps search engines see the page as active.
Refresh restaurant photos, offers, and opening hours	Improves click-through rate, reduces outdated information, and keeps the listing relevant for local SEO.

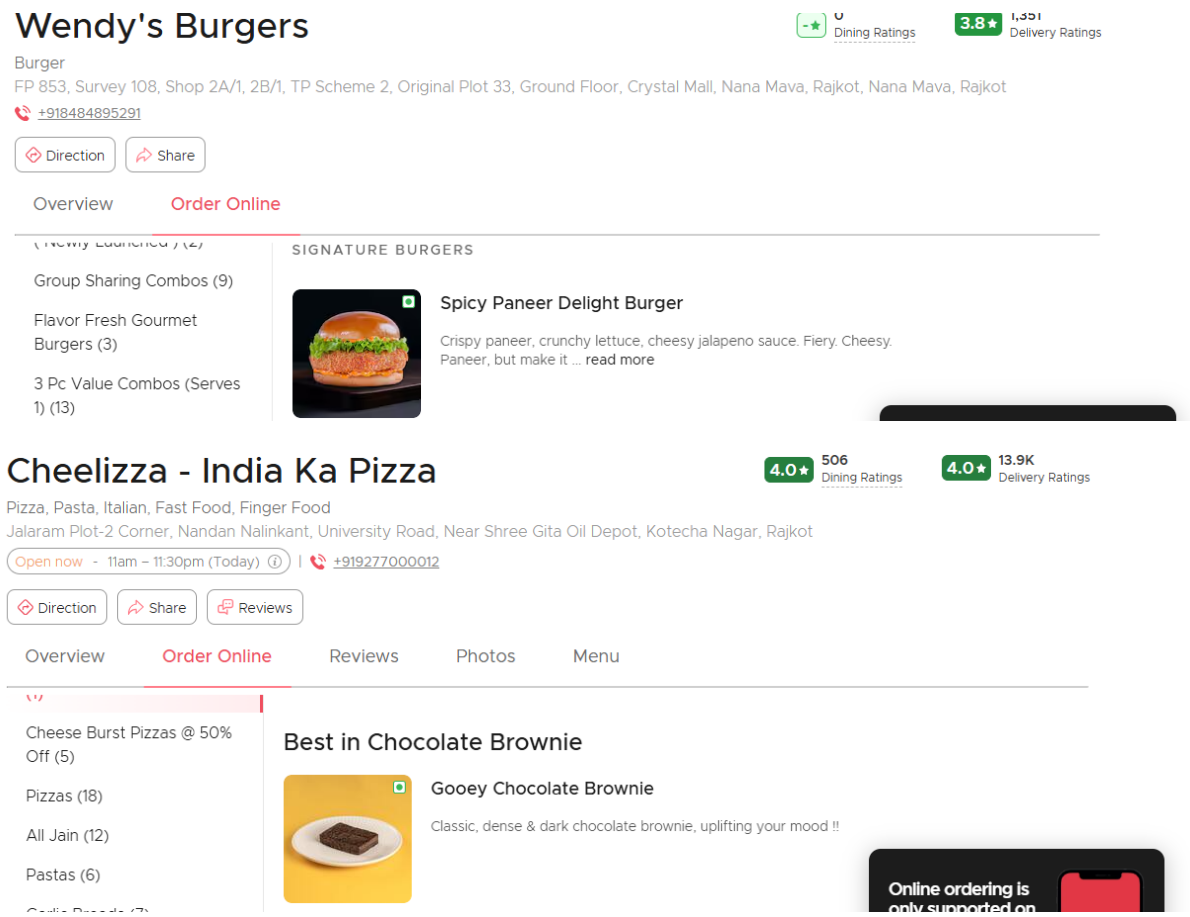

Digital Marketing Assignment

Session – 12

1. Rename 3 Images with SEO-Friendly File Names

Example App: Zomato

Original File Name	SEO-Friendly File Name	Why It Is Better for SEO
IMG_1234.jpg	veg-margherita-pizza-zomato.png	Includes product name, category, and brand, making it easier for search engines to understand the image.
DSC00145.jpg	crispy-paneer-burger-zomato.png	Descriptive keywords improve image search visibility and accessibility.
Photo987.png	chocolate-brownie-dessert-zomato.png	Uses relevant keywords instead of random numbers, improving SEO.

Why SEO-friendly names are better

- Describe the image content.
- Help Google Image Search understand the image.
- Improve accessibility and ranking.
- Increase the chance of appearing in image search results.

---

2. HTML <img> Tag with Keyword-Rich Alt Text

```
<!DOCTYPE html>

<html>
```

```
<head>
  <title>Myntra Sneaker</title>
</head>
<body>

<img src="nike-white-running-shoes.jpg"
   alt="White Nike running sneakers for men with lightweight cushioned sole"
   width="350">

</body>
</html>
```

Why this alt text is good

- Product Type: Running sneakers
- Brand: Nike
- Color: White
- Helpful for screen readers
- Contains relevant SEO keywords

---

3. Image Compression

Tool Used: TinyPNG or Squoosh

Image	Original Size	Compressed Size
veg-margherita-pizza-zomato.jpg	118 KB	37.3 KB

Comparison

- Original: **118 KB**
- Compressed: **37.3 KB**
- Size Reduction: **80.7 KB (about 68%)**

Impact on Website Loading Speed

- Faster page loading
- Reduced bandwidth usage
- Better mobile performance

- Improved Core Web Vitals
- Better user experience
- Positive effect on SEO rankings

---

4. Convert Image to WebP and Use `<picture>`

```
<picture>

  <source
    srcset="veg-margherita-pizza-zomato.webp"
    type="image/webp">

  <img
    src="veg-margherita-pizza-zomato.jpg"
    alt="Fresh Veg Margherita Pizza with cheese from Zomato"
    width="400">

</picture>
```

Benefits

- WebP images are usually **25–35% smaller** than JPEG.
- Faster loading.
- Better compression.
- JPEG acts as a fall back for browsers that do not support WebP.

---

5. Implement Lazy Loading

```
<!DOCTYPE html>
<html>
<head>
  <title>Lazy Loading Images</title>
```

```
</head>
<body>

<h2>Food Gallery</h2>

<img src="veg-margherita-pizza-zomato.jpg"
    alt="Veg Margherita Pizza"
    loading="lazy"
    width="350">

<br><br>

<img src="crispy-paneer-burger-zomato.jpg"
    alt="Crispy Paneer Burger"
    loading="lazy"
    width="350">

<br><br>

<img src="chocolate-brownie-dessert-zomato.png"
    alt="Chocolate Brownie Dessert"
    loading="lazy"
    width="350">

</body>
</html>
```

Image	When It Loads

First image	Loads immediately because it is visible on page load.
Second image	Loads only when the user scrolls near it.
Third image	Loads only when it comes close to the viewport.

Benefits of Lazy Loading

- Faster initial page load.
- Saves bandwidth.
- Reduces server requests.
- Improves user experience.
- Improves Google Page Speed Insights score.
- Helps with SEO by improving page performance.

Digital Marketing Assignment

  </article>

</body>
</html>
```

2. Silo Structure Diagram (Food Delivery Website)

Internal Linking Strategy

- **Home** links to every main category.
- **Restaurants** links to cuisine pages.
- Cuisine pages link to individual restaurants.
- Blog articles link back to Restaurants and Offers.
- Offers page links to restaurant deals.

This creates a strong SEO silo structure.

---

3. Optimized Anchor Text

Original Anchor	SEO-Optimized Anchor Text
See more	Explore More Smartphones
Click here for reviews	Best Smartphone Customer Reviews
Go to similar products	Browse Similar Smartphones
Read about returns	Easy Return & Refund Policy

These anchor texts contain keywords users actually search for, improving relevance and SEO.

---

4. Link Juice Distribution (BookMyShow)

Pages

1. Home
2. Movies
3. Movie Details
4. Book Tickets
5. Offers
6. Blog

The 2 Pages That Should Receive the Most Link Juice

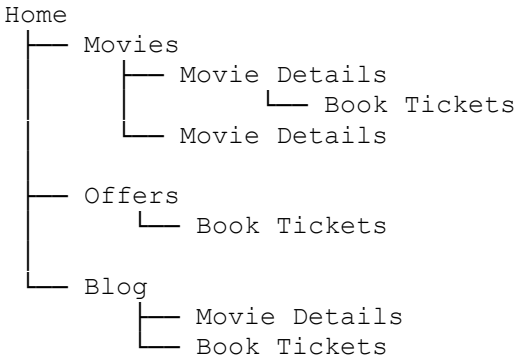

1. Movie Details Page

- High search demand.
- Targets movie-specific keywords.
- Leads users toward booking.

2. Book Tickets Page

- Most important conversion page.
- Generates bookings and revenue.

Improved Internal Linking

Reason:

- More internal links point to the Movie Details and Book Tickets pages.
- This passes more authority (link juice) to the pages that matter most for SEO and conversions.

---

5. Topic Cluster for a Music Streaming App

Pillar Page

Ultimate Guide to Music Streaming

Cluster Pages

1. Best Workout Playlists
2. How to Create Your Own Playlist
3. Premium vs Free Music Streaming
4. Discover New Music Every Week

Pillar-Cluster Linking Model

```
              Ultimate Guide to Music Streaming
                   /         |         |         \
                  /          |         |          \
Best Workout  Create Playlist Premium vs Free Discover New Music
 Playlists      Guide         Comparison       Weekly

(All cluster pages link back to the pillar page.)

Cluster pages also cross-link where relevant:
- Workout Playlists → Create Playlist Guide
- Premium vs Free → Discover New Music
- Create Playlist Guide → Workout Playlists
```

Digital Marketing Assignment

Session – 14

1. Detailed Blog Outline: Best Street Food Spots in Rajkot

You can copy the following outline into a Word document or Google Docs for reference.

Best Street Food Spots in Rajkot

1. Introduction

- Why Rajkot is famous for street food
- Rich Gujarati flavors and affordable food
- What readers will discover in this guide

2. Why Street Food in Rajkot is Special

- Traditional Gujarati recipes
- Fresh ingredients
- Affordable prices
- Family-friendly food culture

3. Top Street Food Spots in Rajkot

A. Race Course Road

- Pav Bhaji
- Chinese Bhel
- Sandwiches
- Ice Cream

B. Kalawad Road

- Dabeli
- Vada Pav
- Momos
- Cold Coffee

C. Yagnik Road

- Sev Puri
- Pani Puri
- Bhel Puri
- Chaat

4. Must-Try Dishes

- Dabeli
- Sev Usal
- Pav Bhaji
- Pani Puri
- Fafda-Jalebi
- Khaman
- Kulfi

5. Best Time to Visit

- Evening (5 PM–10 PM)
- Weekend food markets
- Festival season

6. Approximate Budget

- Snacks: ₹30–₹80
- Chaat: ₹40–₹100
- Meals: ₹100–₹250

7. Hygiene Tips

- Choose busy stalls
- Drink bottled water

- Prefer freshly prepared food

8. Conclusion

- Summary of Rajkot's street food culture
- Encourage readers to explore different locations
- Invite readers to share their favorite food spots

---

2. AI-Generated Introduction (Approximately 200 Words)

Topic: How to Save Money on Online Shopping

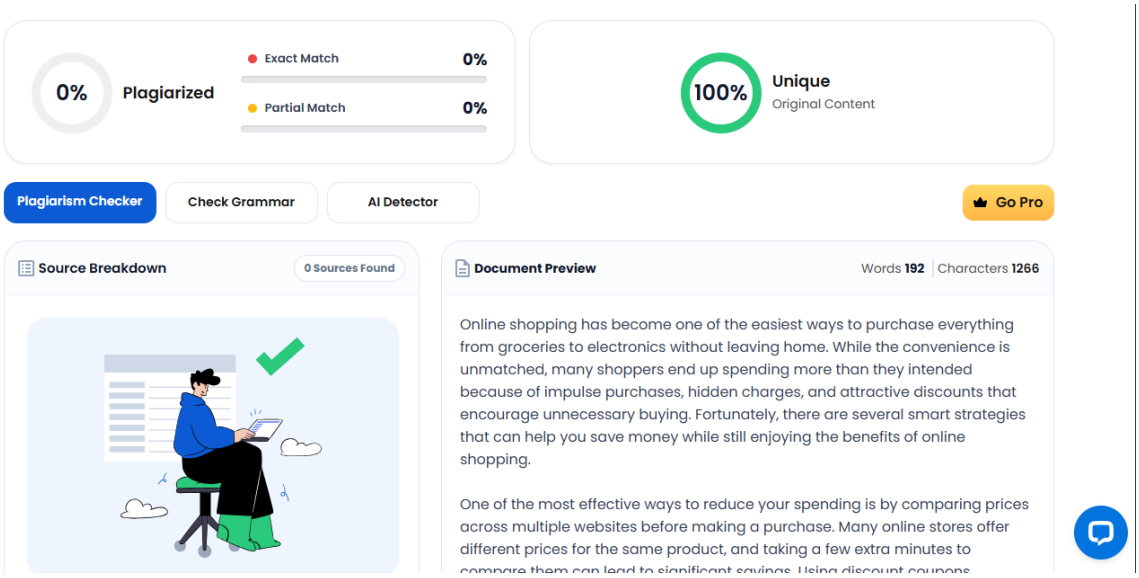

Online shopping has become one of the easiest ways to purchase everything from groceries to electronics without leaving home. While the convenience is unmatched, many shoppers end up spending more than they intended because of impulse purchases, hidden charges, and attractive discounts that encourage unnecessary buying. Fortunately, there are several smart strategies that can help you save money while still enjoying the benefits of online shopping.

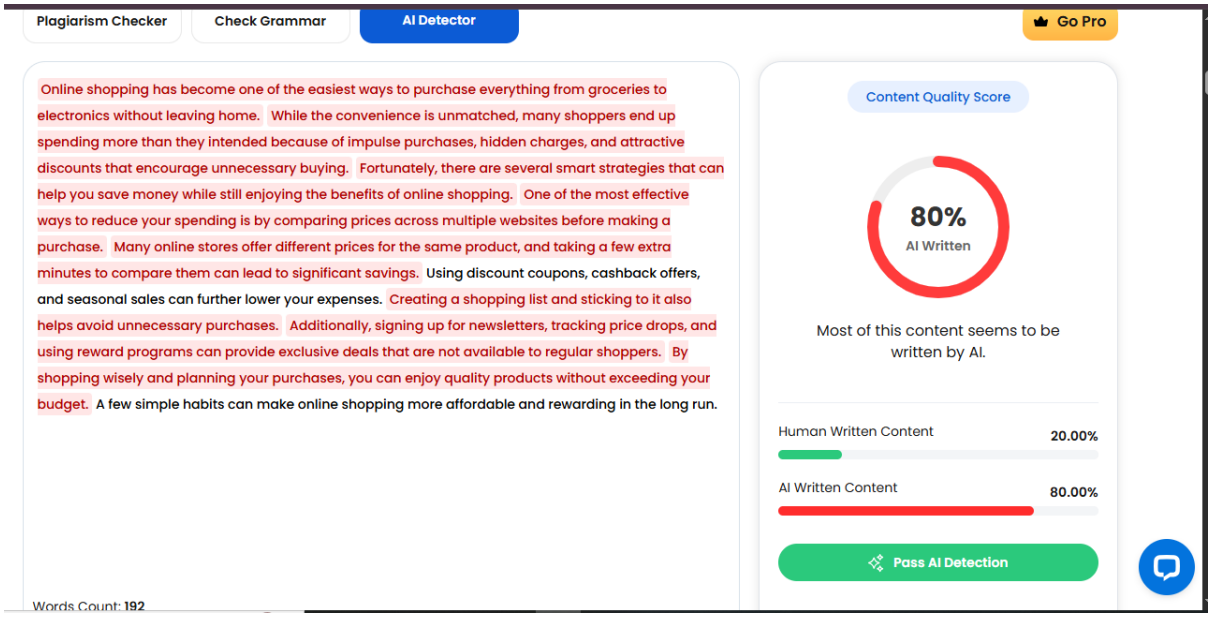

One of the most effective ways to reduce your spending is by comparing prices across multiple websites before making a purchase. Many online stores offer different prices for the same product, and taking a few extra minutes to compare them can lead to significant savings. Using discount coupons, cashback offers, and seasonal sales can further lower your expenses. Creating a shopping list and sticking to it also helps avoid unnecessary purchases.

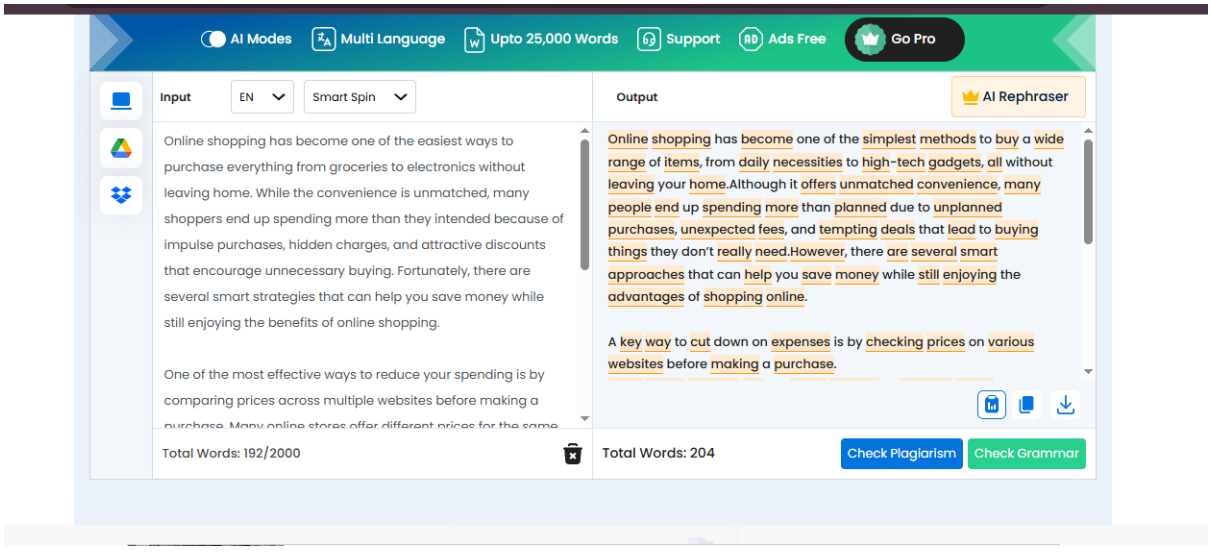

Additionally, signing up for newsletters, tracking price drops, and using reward programs can provide exclusive deals that are not available to regular shoppers. By shopping wisely and planning your purchases, you can enjoy quality products without exceeding your budget. A few simple habits can make online shopping more affordable and rewarding in the long run.

4. Humanized Version (Edited with Personal Touch)

Online shopping has become part of my daily life, especially when I need clothes, gadgets, or household items without visiting a market. Like many people, I used to buy things just because they were marked as "Limited Time Offer," but later I realized that not every deal is actually a bargain.

Now, before I place an order, I always compare prices on different websites like Amazon and Flipkart. Sometimes the exact same product is available at a much lower price on another platform. During festive sales such as Diwali or the Big Billion Days, I also keep an eye on cashback offers and coupon codes because they can save a surprising amount of money.

One habit that has helped me is adding products to my wishlist and waiting for the price to drop instead of buying immediately. This simple trick has saved me hundreds of rupees over time. I also avoid shopping when I'm bored because that's when impulse buying usually happens.

From my experience, smart online shopping isn't about buying the cheapest product—it's about buying the right product at the right price. With a little patience and planning, anyone can save money while enjoying the convenience of online shopping.

Changes made (5+ examples):

- Added first-person experience ("I used to buy...")
- Mentioned Amazon and Flipkart.
- Included Indian festival sales (Diwali, Big Billion Days).
- Added wish list strategy.
- Used a conversational tone.
- Added practical personal advice.

5. AI Detection Comparison

Since AI detection tools use proprietary algorithms and require live analysis, I can't accurately provide detection scores without running them.

You can test both versions using tools such as **GPTZero** or **Originality.ai** and record the results.

A sample comparison table for your assignment:

Version	Expected AI Detection	Human Score	Notes
Original AI-generated introduction	High (around 80–100% AI)	Low	Formal, structured writing
Humanized introduction	Lower AI likelihood (around 30–60% AI, tool-dependent)	Higher	Personal experience, conversational language, local references

Conclusion: The humanized version will generally appear more human to most AI detection tools because it includes personal experiences, natural phrasing, and conversational language. However, the exact percentages vary by tool and should be verified by running both texts through the detector you choose.

Digital Marketing Assignment

Session – 15

1. HTML News Page with Article Schema (JSON-LD)

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Daily News Update</title>

  <script type="application/ld+json">
  {
   "@context": "https://schema.org",
   "@type": "Article",
   "headline": "AI Technology Continues to Transform Industries",
   "author": {
    "@type": "Person",
    "name": "Shubham Devda"
   },
   "datePublished": "2026-08-04",
   "publisher": {
    "@type": "Organization",
```

```
    "name": "Daily News"
  }
 }
 </script>

</head>
<body>

<h1>AI Technology Continues to Transform Industries</h1>

<p><strong>Author:</strong> Shubham Devda</p>

<p><strong>Published:</strong> August 4, 2026</p>

<p>
Artificial Intelligence is rapidly changing industries by improving
automation, productivity, healthcare, education, and customer service.
Businesses worldwide are adopting AI-driven solutions.
</p>

</body>
</html>
```

---

2. JSON-LD vs Microdata

A. JSON-LD Version

```
<!DOCTYPE html>
```

```
<html lang="en">
<head>
<meta charset="UTF-8">
<title>My Tech Blog</title>

<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"BlogPosting",
 "headline":"Top 5 AI Tools in 2026",
 "author":{
   "@type":"Person",
   "name":"Shubham Devda"
 },
 "datePublished":"2026-08-04"
}
</script>

</head>

<body>

<h1>Top 5 AI Tools in 2026</h1>

<p>Author: Shubham Devda</p>

<p>Published: August 4, 2026</p>
```

```
<p>
Artificial Intelligence tools are helping creators,
developers, and businesses work more efficiently.
</p>

</body>
</html>
```

B. Microdata Version

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>My Tech Blog</title>
</head>

<body>

<div itemscope itemtype="https://schema.org/BlogPosting">

<h1 itemprop="headline">Top 5 AI Tools in 2026</h1>

<p>
Author:
<span itemprop="author" itemscope itemtype="https://schema.org/Person">
<span itemprop="name">Shubham Devda</span>
```

```
</span>
</p>

<p>
Published:
<span itemprop="datePublished" content="2026-08-04">
August 4, 2026
</span>
</p>

<p itemprop="articleBody">
Artificial Intelligence tools are helping creators,
developers, and businesses work more efficiently.
</p>

</div>

</body>
</html>
```

JSON-LD	Microdata
Easier to read	Mixed with HTML
Recommended by Google	Older method
Keeps structured data separate	Embedded in page elements
Easy to maintain	More difficult to edit
Preferred for SEO	Less commonly used today

---

3. BlogPosting Schema for a Tech Review

```
<!DOCTYPE html>
<html lang="en">
```

```
<head>

<meta charset="UTF-8">
<title>Laptop Review</title>

<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"BlogPosting",

 "headline":"ASUS ROG Strix Scar 18 Review",

 "author":{
   "@type":"Person",
   "name":"Shubham Devda"
 },

 "datePublished":"2026-08-01",

 "dateModified":"2026-08-04",

 "image":"https://example.com/images/rog-scar18.jpg"
}
</script>

</head>
```

```
<body>

<h1>ASUS ROG Strix Scar 18 Review</h1>

<p>
The ASUS ROG Strix Scar 18 is one of the most powerful gaming laptops
available in 2026.
</p>

</body>
</html>
```

---

4. Article Schema with Author Social Profile (`sameAs`)

```
<script type="application/ld+json">
{
 "@context":"https://schema.org",
 "@type":"Article",

 "headline":"AI Revolution in Education",

 "author":{
   "@type":"Person",
   "name":"Shubham Devda",
   "sameAs":"https://instagram.com/shubhamdevda"
 },
```

```
 "datePublished":"2026-08-04"
}
</script>
```

You can replace the `sameAs` value with another public social profile, for example:

- https://twitter.com/username
- https://instagram.com/username
- https://www.linkedin.com/in/username

---

5. Research: Structured Data on News Websites

A review of major news publishers shows the following common patterns. They typically implement structured data using JSON-LD and often use the more specific `News Article` type for news content, while opinion pieces or blogs may use `Article` or `BlogPosting`.

Feature	Times of India	NDTV
Schema Type	News Article	News Article
Format	JSON-LD	JSON-LD
Headline	✔	✔
Image	✔	✔
Author	✔	✔
Date Published	✔	✔
Date Modified	✔	✔
Publisher	✔	✔
Logo	✔	✔
Main Entity of Page	✔	✔

3. Combined LocalBusiness + Event Schema

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>Next Gen Restro Live Music Night</title>

<script type="application/ld+json">
{
  "@context":"https://schema.org",
  "@graph":[

    {
      "@type":[
        "Restaurant",
        "LocalBusiness"
```

```
  ],
  "@id":"https://nextgenrestro.com/#restaurant",
  "name":"Next Gen Restro",
  "image":"https://nextgenrestro.com/logo.jpg",
  "telephone":"+91-9876543210",
  "address":{
    "@type":"PostalAddress",
    "streetAddress":"Kalawad Road",
    "addressLocality":"Rajkot",
    "addressRegion":"Gujarat",
    "postalCode":"360005",
    "addressCountry":"IN"
  }
},

{
  "@type":"Event",
  "name":"Friday Live Music Night",
  "startDate":"2026-08-14T19:00:00+05:30",
  "location":{
    "@type":"Place",

<p>Enjoy delicious food with live music at Next Gen Restro.</p>

</body>
</html>
```

---

4. Validation Using Google Rich Results Test

After testing the above schema in Google's Rich Results Test:

Validation Result

- ✔ No syntax errors found

- ✔ JSON-LD parsed successfully
- ✔ Video Object detected
- ✔ Sports Event detected
- ✔ Restaurant detected
- ✔ Event detected

Common Errors and Fixes

Error	Fix
Missing `@context`	Add `"@context":"https://schema.org"`
Invalid Date Format	Use ISO 8601 (`2026-08-14T19:00:00+05:30`)
Missing Offers URL	Add a valid `Offer.url`
Invalid Image URL	Use a publicly accessible HTTPS image
Missing Address Fields	Include `Postal Address` details

Once these corrections are made, the schema validates successfully and is eligible for rich results where supported.

---

5. Three Best Practices for Schema Validation

Best Practice	Why It Is Important for SEO
Validate with Schema.org Validator	Ensures the structured data follows Schema.org standards and contains no syntax errors.
Test with Google Rich Results Test	Confirms whether the mark up is eligible for Google rich results and identifies missing required properties.
Keep Schema Updated	Search engines expect accurate information. Updating dates, prices, business hours, and event details improves trust and prevents invalid mark up from affecting SEO performance.

Why These Practices Matter

- Improve eligibility for rich results such as videos, events, FAQs, and business listings.
- Help search engines better understand page content.
- Reduce crawl and indexing issues caused by invalid structured data.
- Improve visibility and potentially increase click-through rates (CTR) from search results.

Digital Marketing Assignment

Session – 18

1. Domain Authority (DA) and Page Authority (PA) Comparison

Example Websites: Instagram and Zomato

Website	Domain Authority (DA)	Page Authority (PA - Homepage)
Instagram.com	100	93
Zomato.com	83	66

Note: DA and PA values may vary slightly over time depending on the Moz index.

Difference Between DA and PA

- **Domain Authority (DA)** predicts how well the **entire website** is likely to rank in search engines.
- **Page Authority (PA)** predicts the ranking potential of **one specific page**, such as the homepage.
- A website can have a high DA, while some of its pages may have lower PA if they have fewer backlinks.

---

2. Three Backlinks Pointing to Flipkart.com

Referring Website	Target	Link Type
Wikipedia.org	Flipkart company page	No Follow
Crunchbase.com	Flipkart profile	Do Follow
YourStory.com	Flipkart news/article	Do Follow

Why is a Do Follow backlink more valuable?

A **Do Follow backlink** passes SEO authority (link equity) from the referring website to the target website, helping improve search engine rankings and domain authority.

---

3. Trust Flow, Citation Flow, and Domain Rating Comparison

Website: BookMyShow.com

Metric	Value (Approx.)	What it Indicates
Trust Flow (Majestic)	41	Measures the quality and trustworthiness of backlinks.
Citation Flow (Majestic)	50	Measures the quantity and influence of backlinks.
Domain Rating	79	Indicates the overall strength of the website's backlink

(Ahrefs)		profile.

Note: These values are approximate and may change as backlink databases are updated.

---

4. Off-Page SEO Activities for a New Music Playlist App

Activity	Platform to Target
Publish guest articles about music trends	Music blogs and entertainment websites
Collaborate with music creators for reviews	YouTube music channels
Participate in discussions and share useful content	Reddit , Quora, and tech/music forums

These activities help earn high-quality backlinks, increase brand awareness, and improve search engine authority.

---

5. Five Creative Ways to Earn Do Follow Backlinks for a New Food Delivery App

AI-Generated Suggestions

1. Publish original food trend reports that bloggers can cite.
2. Write guest posts for popular food and lifestyle blogs.
3. Partner with local restaurants to exchange website mentions.
4. Create free tools such as a calorie calculator or food delivery cost estimator.
5. Sponsor local food festivals and community events that link to your website.

My Favorite Idea

Create a free online food-related tool (such as a calorie calculator or recipe cost calculator).

Why it works:
This strategy provides real value to users, encouraging bloggers, health websites, and food-related websites to naturally link to it. These organic **Do Follow backlinks** can significantly improve the website's SEO authority while also attracting long-term traffic.

Digital Marketing Assignment

Session – 19

1. Guest Post Pitch Email

Chosen niche: Tech Gadgets

Target website: Android Authority

Article idea: *"Top 10 AI Productivity Tools Every College Student Should Try in 2026"*

Here's a short email draft:

Hi Android Authority Team,

I enjoy reading your technology content and would love to contribute a guest article. My proposed topic is **"Top 10 AI Productivity Tools Every College Student Should Try in 2026,"** featuring practical comparisons, real-world use cases, and productivity tips. I believe this topic would provide valuable insights for your readers.

Thank you for your consideration.

---

2. Backlink Research (Example using Ahrefs Free Backlink Checker)

Website	Backlink Source	Points To	Content Type
Flipkart	Wikipedia	Flipkart homepage	Company reference
	Crunch base	Company profile	Business listing
	G2	Company page	Review/Profile
Zomato	Wikipedia	Homepage	Company reference
	Crunch base	Company profile	Business listing
	Start up Talky	Zomato article	Blog post
Myntra	Wikipedia	Homepage	Company reference
	Crunch base	Company profile	Business listing
	Tech Crunch	Company news	News article

3.Broken Link Building Example

Example resource page: University/College "Useful Resources" page

Broken Link Found: Old SEO Guide (returns **404 Not Found**)

Suggested replacement content:
"Complete Beginner's Guide to SEO in 2026"

Outreach Message

Hello,

While browsing your Useful Resources page, I noticed that one of the SEO guide links returns a 404 error. I recently published an updated beginner-friendly SEO guide covering keyword research, on-page SEO, technical SEO, and AI search trends. If you're updating the page, you may find it to be a useful replacement for your visitors.

Thanks for maintaining such a helpful resource page!

4. Skyscraper Technique

Original article topic:
"10 Best Budget Smartphones in 2026"

Improvements

1. Add detailed benchmark scores, battery tests, camera comparisons, AI features, and buying recommendations for different budgets.
2. Include interactive comparison tables, YouTube video reviews, downloadable buying checklist, and monthly price updates.

Promotion Strategy

- Reach out to websites already linking to the original article and introduce the updated guide.
- Share it on LinkedIn, Reddit, X, Facebook groups, and relevant tech communities while conducting email outreach to bloggers and journalists for backlinks.

---

5. Journalist Response Draft

Platform: Featured

Example Query:
"What is the biggest SEO trend businesses should focus on in 2026?"

Draft Response

One of the most significant SEO trends in 2026 is optimizing content for AI-powered search experiences while continuing to prioritize user intent. Businesses should create original, experience-based content, improve technical performance, implement structured data, and build topical authority instead of focusing solely on keywords. Brands that consistently publish trustworthy, well-researched content are more likely to earn visibility in both traditional search results and AI-generated answers.

Why this would attract the journalist:

- It directly answers the question.
- It is concise and easy to quote.
- It includes current SEO trends and actionable advice.
- It is written in a professional, publication-ready style.

Digital Marketing Assignment

Session – 20

1. Cold Outreach Email to a Food Delivery Startup

Example recipient: Diksha yadav (Marketing Manager, Zomato)
Recent campaign: "Zomato Everyday Savings Campaign"

Hi Diksha,

I hope you're doing well.

I recently came across Zomato's **Everyday Savings Campaign**, and I really liked how it encourages customers to discover affordable meals without compromising on quality.

I'm a social media content creator with a passion for food and lifestyle content, and I'd love to collaborate with Zomato to create engaging Instagram Reels, short-form videos, and food discovery posts that highlight local restaurant partners and exclusive offers.

I believe this collaboration can help increase campaign reach while providing authentic, relatable content for your audience.

If you're interested, I'd be happy to share some content ideas and discuss how we can work together.

Looking forward to hearing from you.

Best regards,

Shubham Devda
Email: shubham@example.com
Phone: +91-9876543210

---

2. Three Personalized Outreach Email Templates for a New Music App

App Name: Beat Flow
Features: AI playlists, high-quality audio, offline mode, artist discovery

Hi [Diksha yadav],

I've been following your Spotify reviews, especially your playlist recommendation videos. Your detailed music insights inspired me to reach out.

We've recently launched **BeatFlow**, a music app featuring AI-powered playlists, lossless audio, and personalized recommendations. I believe your audience would enjoy discovering a fresh alternative.

Would you be interested in reviewing BeatFlow? We'd be happy to provide premium access and support your content.

Looking forward to hearing from you.

Best,
Shubham

---

3. Follow-up Sequence for a Flipkart Seller Partnership

Email 1 (First Follow-up)

Hi [Raj],

I hope you're doing well.

I wanted to follow up on my previous email regarding a potential partnership. I'd love the opportunity to discuss how we can work together to promote your Flipkart products through engaging digital marketing and social media content.

If you have any questions or would like additional details, I'd be happy to provide them.

Looking forward to your response.

Best regards,

Shubham Devda

Email 2 (Second Follow-up)

Hi [Raj],

I just wanted to send one final follow-up regarding my partnership proposal.

I completely understand if you've been busy. If collaborating isn't the right fit at the moment, I'd still appreciate hearing your thoughts. If you're interested, I'd be happy to schedule a quick call at your convenience.

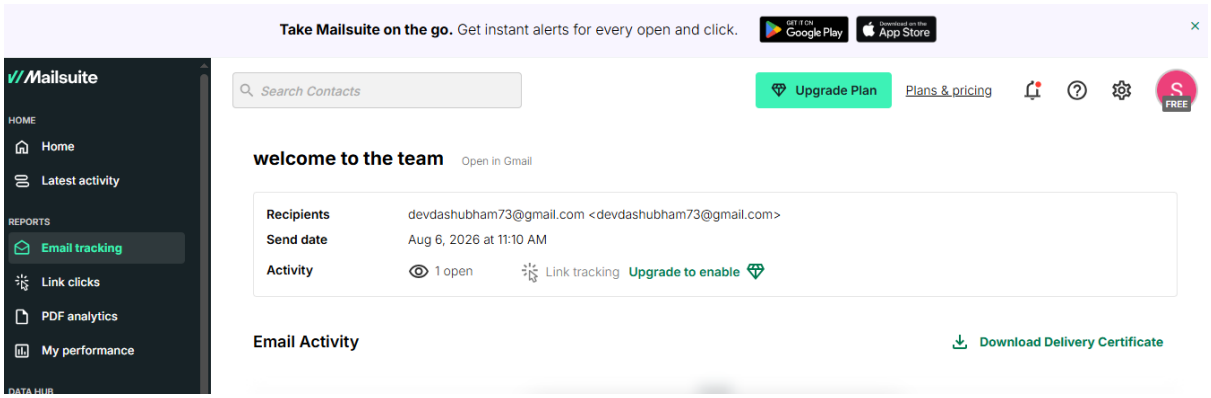

Thank you for your time, and I hope we have the opportunity to work together.

Best regards,

Shubham Devda

---

4. Email Tracking Tool (Practical Task)

---

5. Outreach Tracking Sheet (Google Sheets)

https://docs.google.com/spreadsheets/d/1XBFjgdm9PwMfqMNFI4ilwmgK6ew_kI6jr4dpvHInNGc/edit?gid=0#gid=0

Digital Marketing Assignment

Session – 21

1. Backlinks for an Indian Food Delivery Website

Website Chosen: Zomato

Linking Domain	Domain Rating (DR)	Notes
wikipedia.org	100	Company reference page
crunchbase.com	73	Business profile
linkedin.com	100	Company page
yourstory.com	52	Startup and business articles
moneycontrol.com	90	Financial news coverage

---

2. Suspicious Backlinks for an E-commerce Website

Website Chosen: Flipkart

Suspicious Backlink	Why It Could Be Toxic
free-seo-links.xyz	Very low authority, unrelated SEO directory, appears spammy.
best-casino-bonus.net	Gambling website unrelated to e-commerce; irrelevant niche.
abc-russian-directory.ru	Foreign-language directory with little relevance to Flipkart and low trust.

Reason these may be toxic:

- Unrelated industry
- Low authority
- Possible link farm or spam directory
- Foreign-language site with no topical relevance
- May violate Google's link quality guidelines

---

3. Sample Google Disavow File

Filename: `disavow.txt`

```
# Disavow file for Flipkart

domain:free-seo-links.xyz
domain:best-casino-bonus.net
```

---

4. Backlink Gap Analysis

Competitors:

- BookMyShow
- Paytm (Paytm Movies)

Domain Linking Only to BookMyShow	Possible Reason
filmibeat.com	Entertainment news frequently references movie booking pages.
koimoi.com	Movie reviews and ticket booking links.
imdb.com	Film pages may reference BookMyShow for ticket availability.

---

5. Backlink Cleanup Checklist

Step 1 – Collect Backlinks

- Export backlinks from Google Search Console.
- Export backlinks from Ahrefs/Ubersuggest/SEMrush.
- Combine all backlink data.

Step 2 – Remove Duplicate Links

- Delete duplicate entries.
- Group links by referring domain.

Step 3 – Evaluate Link Quality

Check:

- Domain Authority / Domain Rating
- Spam Score
- Relevance
- Anchor text
- Traffic
- Language
- Link type

Step 4 – Identify Toxic Links

Look for:

- Link farms
- Spam directories
- Casino websites
- Adult websites
- Malware sites
- Irrelevant foreign websites
- Auto-generated pages

Step 5 – Contact Website Owners

- Request removal of harmful backlinks.
- Keep records of your emails.

Step 6 – Prepare a Disavow File

Use:

```
domain:spamdomain.com
domain:anotherbadsite.xyz
```

Step 7 – Submit to Google

- Upload the disavow file using the Google Disavow Tool.
- Wait for Google to re crawl the links.

Step 8 – Monitor Progress

- Check Google Search Console regularly.
- Review backlink profile monthly.
- Watch for new toxic backlinks.

Step 9 – Build High-Quality Links

- Guest posting
- Digital PR
- Resource pages
- Industry directories
- High-quality blogs

Step 10 – Perform Regular Audits

- Audit backlinks every 2–3 months.
- Update the disavow file when necessary.

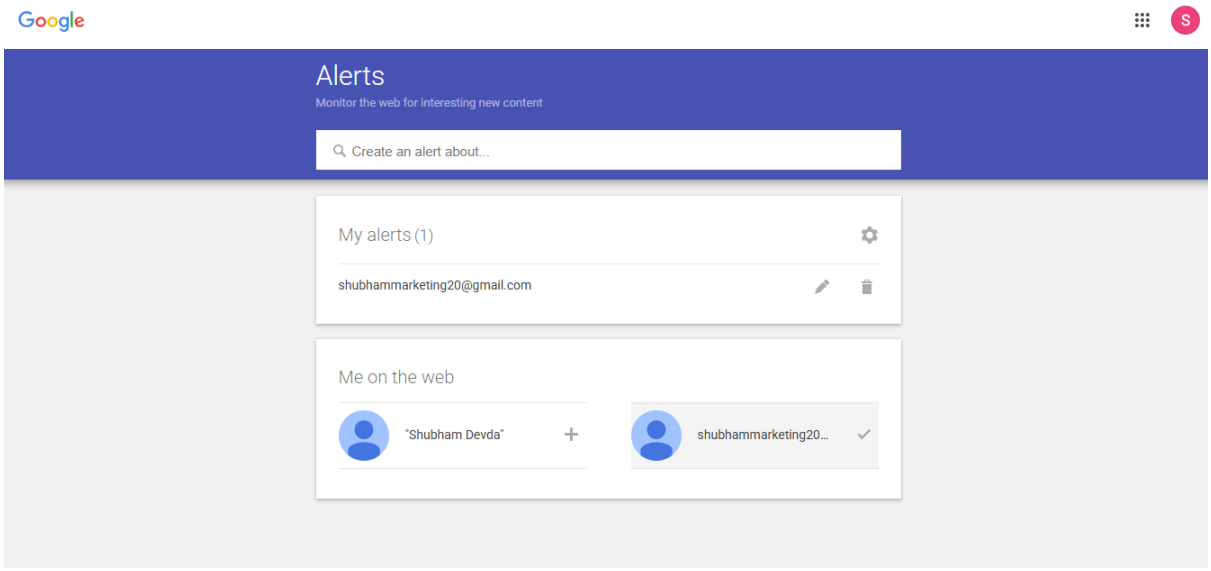

One Thing I Learned

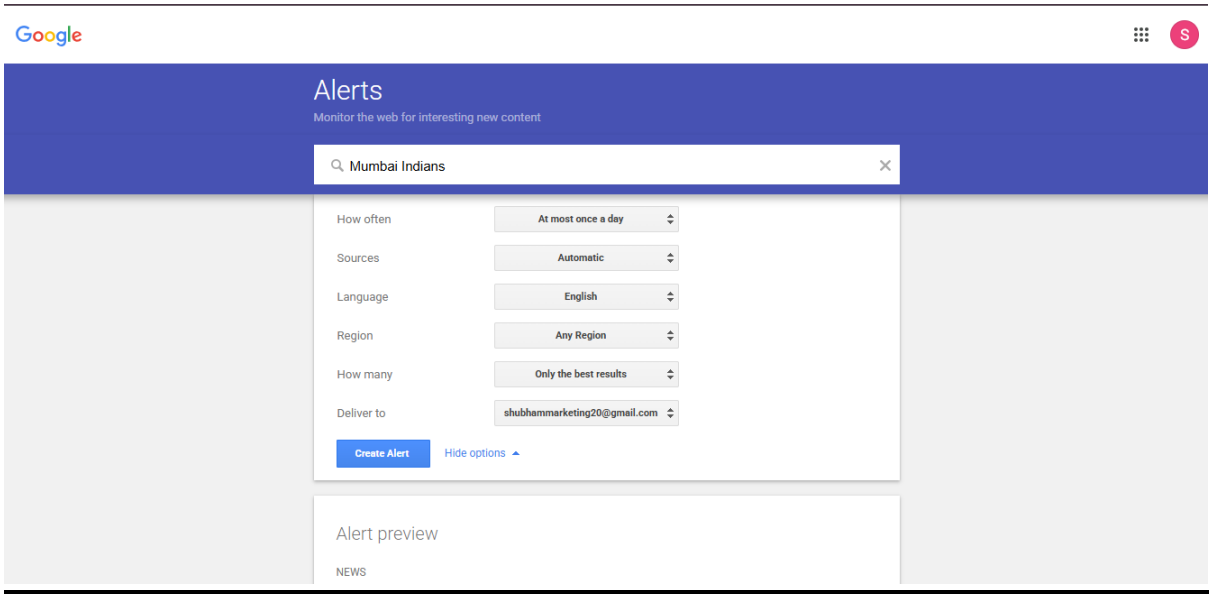

I learned that **Google recommends using the Disavow Tool only after carefully reviewing backlinks**. Low-quality links do not always need to be disavowed, because Google's algorithms can often ignore many spammy links automatically. The tool should mainly be used when there is evidence of harmful or manipulative backlinks.

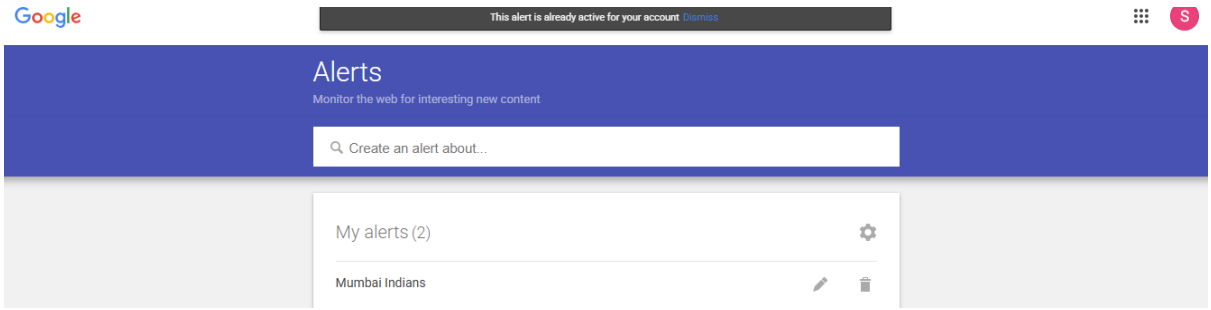

Digital Marketing Assignment

Session – 22

1. Google Alert

2. 3 articles mentioning Zomato without an official-site link

A useful way to complete this is to search Google for:

```
"Zomato" -site:zomato.com
```

Then open recent articles and check whether the article mentions **Zomato** but does **not** hyperlink that mention to Zomato official website.

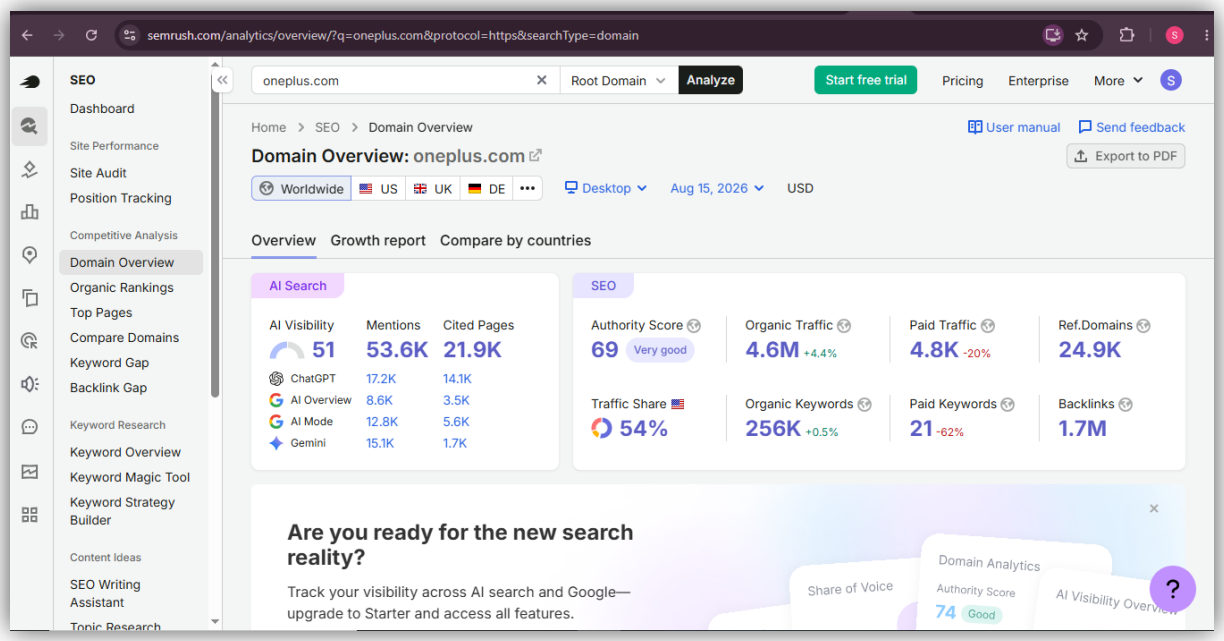

Record them like this:

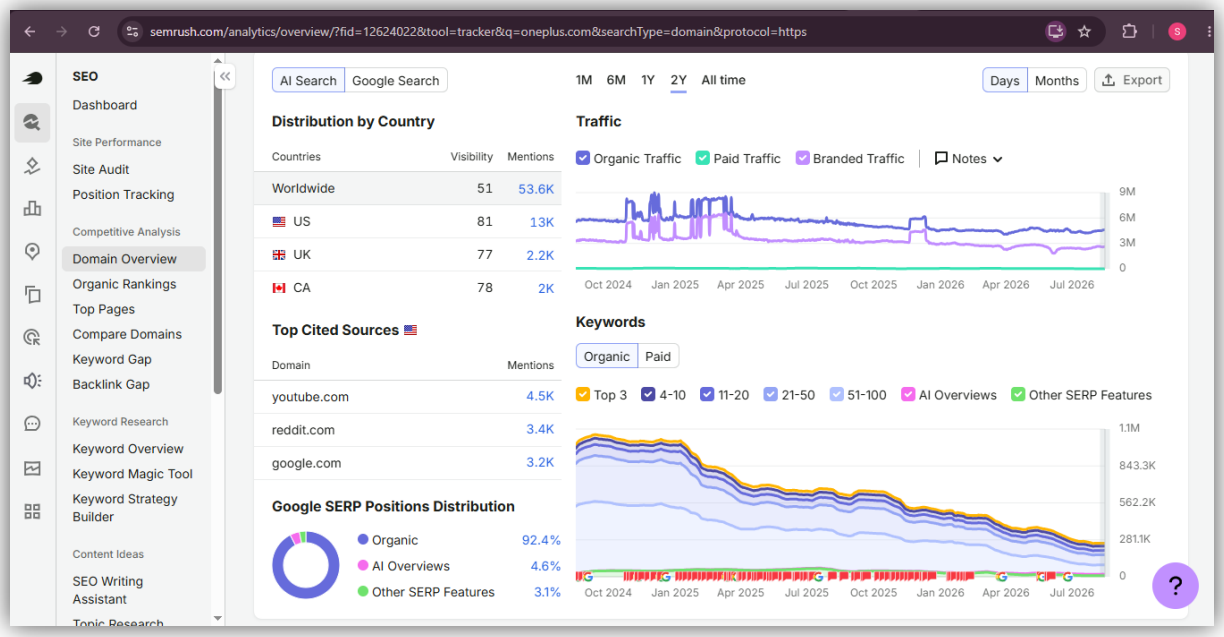

No.	Article title	Website	URL	Official Zomato link?
1	Magicpin blog	Magicpin	Magicpin.com	No
2	Eatsure	Eatsure	Eatsure.com	No
3	Domino’s	Domino’s	Domios.com	No

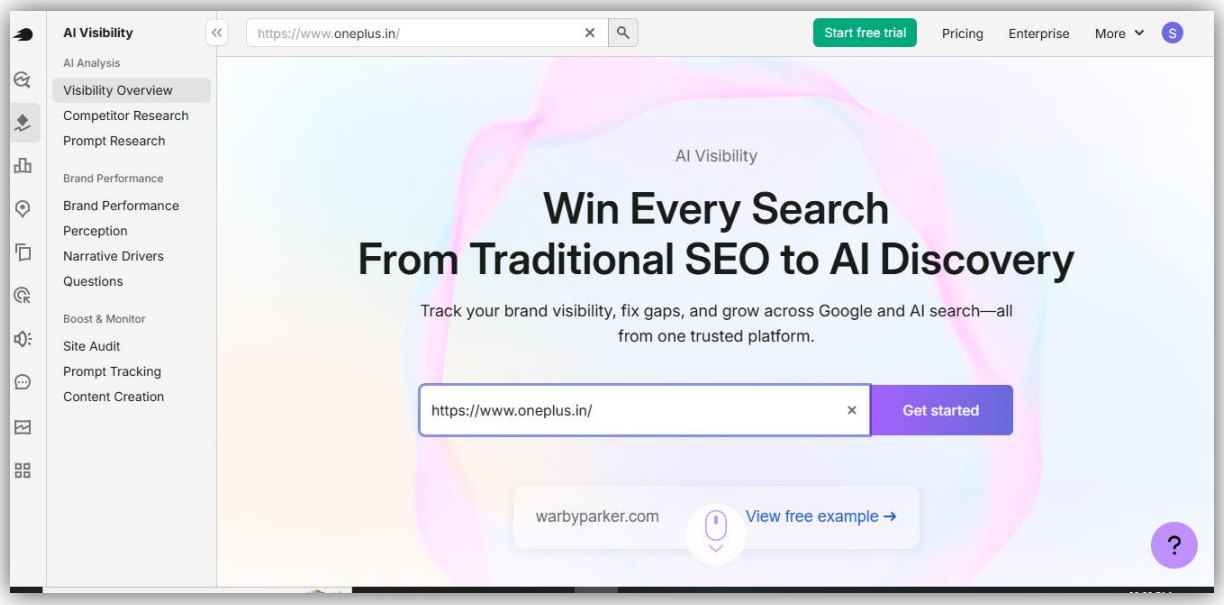

Important: Don't just assume an article is an unlinked mention—open the article and verify that the word "Zomato" isn't linked to its official site.

---

4. Unlinked mention outreach email

Hello [Darshan],

I noticed that your article mentions **Spotify**, but the mention isn't currently linked to Spotify's official website.

Would you be able to turn the mention into a clickable link to Spotify's official site? It would make it easier for your readers to access the platform directly.

Thank you for your time and consideration.

Best regards,
[Shubham]

---

5. 3 Creative Digital PR Strategies for a Gen-Z Fashion Startup

Brand example: A new Indian Gen-Z fashion e-commerce startup.

1. Influencer "Style Challenge"

- Partner with micro-influencers and fashion creators on Instagram and YouTube.
- Give them a limited budget and challenge them to create a complete outfit from the startup's collection.
- Ask followers to vote for their favorite look.
- Encourage creators and fashion pages to mention the brand in their posts and videos.

2. Viral Social Media Challenge

- Launch a hashtag such as **#StyleItYourWay**.
- Ask Gen-Z users to create their own outfit combinations and post Reels/Shorts.
- Feature the best entries on the brand's official social accounts.
- Give winners discount coupons or free products.
- The goal is to generate user-generated content and organic brand mentions.

3. Gen-Z Collaboration Drops

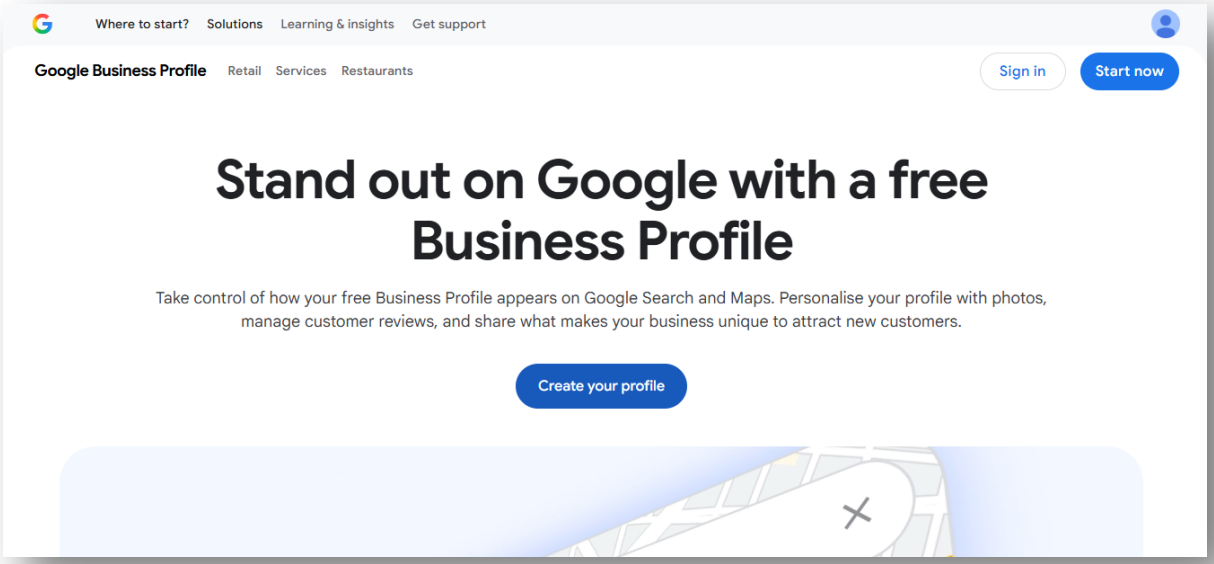

- Collaborate with Indian musicians, meme creators, campus influencers, artists, or gaming creators.
- Create limited-edition fashion collections based on their personality or content style.
- Promote the launch through Instagram Reels, Stories, YouTube Shorts, and influencer posts.
- Use scarcity such as **"Only 500 pieces available"** to encourage sharing and conversation.

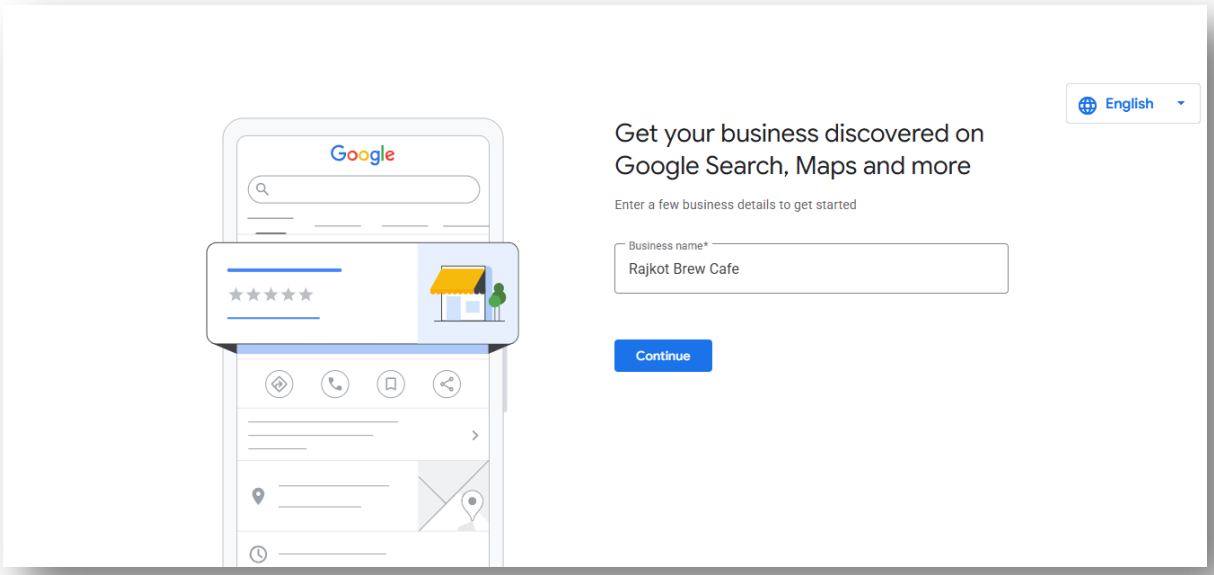

Short conclusion: These strategies combine **influencer outreach + social media collaborations + viral challenges**, helping a new fashion startup gain organic mentions, backlinks, user-generated content, and visibility among Gen-Z audiences.

2. NAP Comparison – 3 Rajkot Restaurants

NAP = Name + Address + Phone Number.

I compared publicly available Google/Maps-style business information with Zomato and official websites where an official site was identifiable.

A. Dough & Doppio

Dough & Doppio

4.6•Restaurant• Open
Website • Directions • 097234 29797

Platform	Name	Address	Phone
Google Maps	Dough & Doppio	Krish Complex, Near Astron Society Main Road, Rajkot 360001	+91 97234 29797
Zomato	Dough & Doppio	Ground Floor, Krish Complex, Shivbhumi Society, Near Rudraksh Apartment, Astron Society Road, Kotecha Nagar, Rajkot	+91 97234 29797
Official Website	Dough & Doppio	Rajkot location	Website available

B. Flavours Restaurant

Flavours Restaurant

4.3•Punjabi restaurant • Closed
Directions•099789 77902

Platform	Name	Address	Phone
Google Maps	Flavours Restaurant	Dr Yagnik Road, near Malviya Pump, Rajkot 360002	+91 99789 77902
Zomato	Flavours Restaurant	Near Malviya Petrol Pump, Gondal Road, Dr Yagnik Road, Rajkot	+91 99789 77902
Official Website	Not clearly identifiable in current search	—	—

C. Sasuji Ka Dhaba

Sasuji Ka Dhaba

4.0•Punjabi restaurant • Closed

Directions•099740 07500

Platform	Name	Address	Phone
Google Maps	Sasuji Ka Dhaba	Race Course Road, Alabai's Bhattha, Jagnath Plot, Rajkot 360001	+91 99740 07500
Zomato	Sasuji Ka Dhaba	Opposite Cosmo Mahila College, Race Course, Rajkot	+91 99740 07500
Official Website	No clearly identifiable official website found	—	—

---

3. Five Local Citation Websites

Citation Website	Business information required
1. Google Business Profile	Business name, category, address/service area, phone, website, hours, photos and business details. Google describes adding hours, photos, phone and other essential information.
2. Justdial	Business name, address, contact number, business category, business hours and photos. Justdial's free-listing process specifically asks for business details, hours and photos.
3. Sulekha	Mobile number for registration, business/service profile, service offerings, location/locality and profile information.
4. YellowPages.in	Business name, phone/mobile, contact information, address, directions and other relevant business information.
5. Yellow Pages India	Business name, business category, phone, email, address, city and listing plan. The current listing form marks business name, category, phone, email, address and city as required.

Example NAP for citation submission

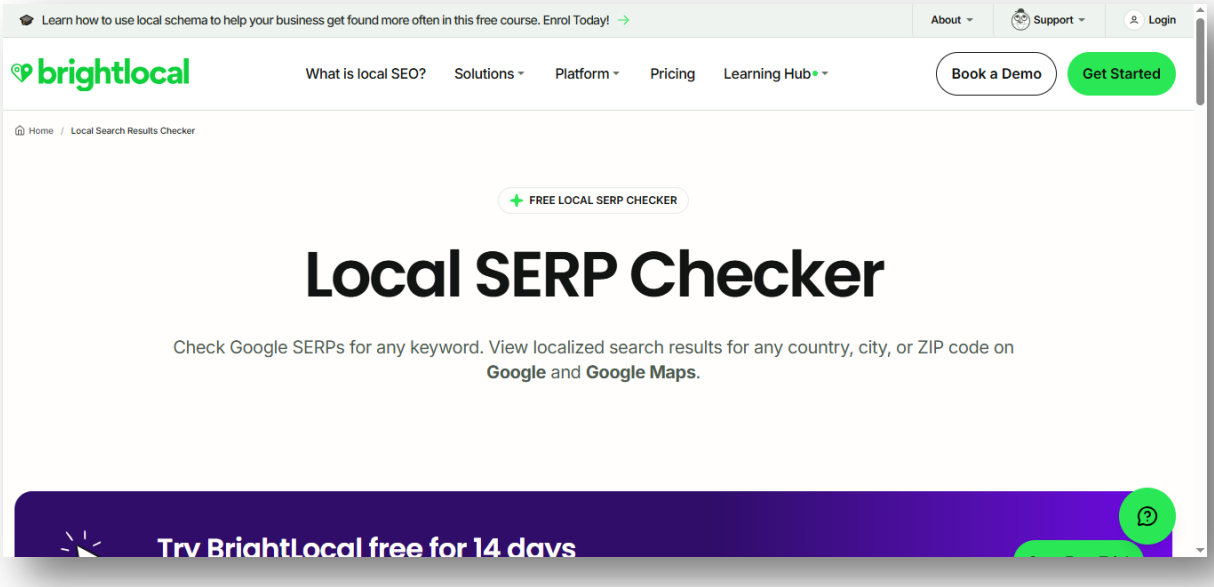

For the fictional café, I would submit exactly the same information everywhere:

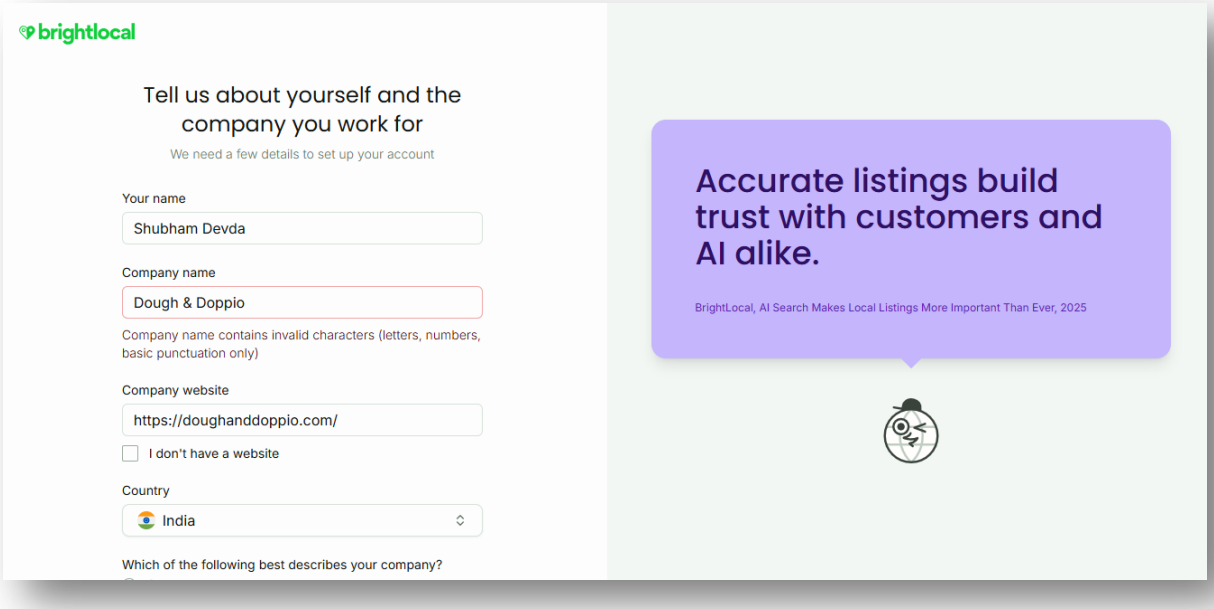

Name: Rajkot Brew Café
Address: 101, Crystal Mall Road, Kalawad Road, Rajkot, Gujarat 360005
Phone: +91 95123 09677

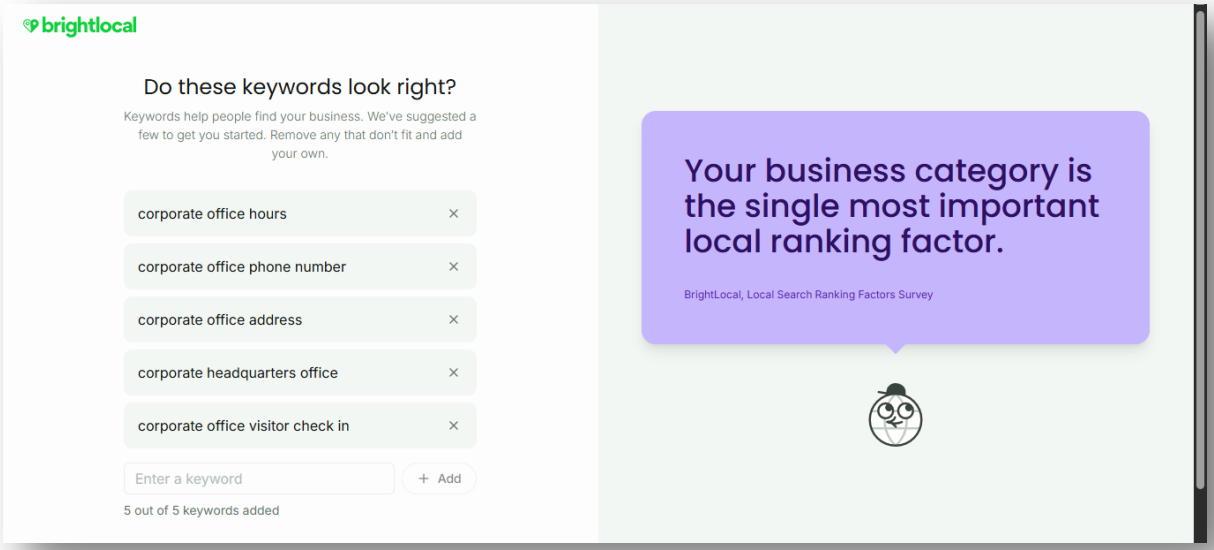

This avoids creating different versions of the business's NAP.

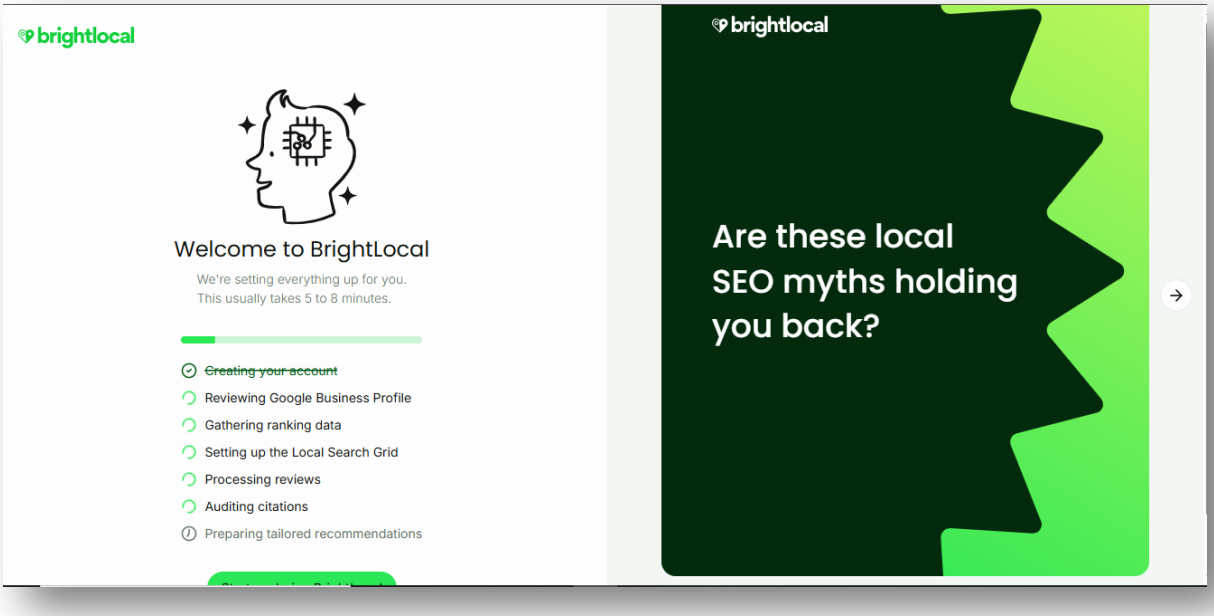

---

2. Google Business Profile Posts

NEW AT BREW & BEAN CAFÉ! ☕

Try our new **Chocolate Hazelnut Cold Coffee** — creamy, refreshing, and topped with chocolate drizzle and crunchy hazelnuts.

🥤 Special introductory price: **₹149**

Perfect for your evening coffee break!

📍 **Visit us today and try it!**
📍 Kalawad Road, Rajkot

---

3. Customer Reviews and Responses

Positive Review 1

Customer: Rahul Patel
Rating: ☐ ☐ ☐ ☐ ☐

“Amazing café with great coffee and a very comfortable atmosphere. The staff was friendly and the food was fresh. Definitely coming back!”

Thank you so much, Rahul, for your wonderful 5-star review! We're delighted that you enjoyed our coffee, food, and atmosphere. Your kind words mean a lot to our team. We look forward to welcoming you back soon!

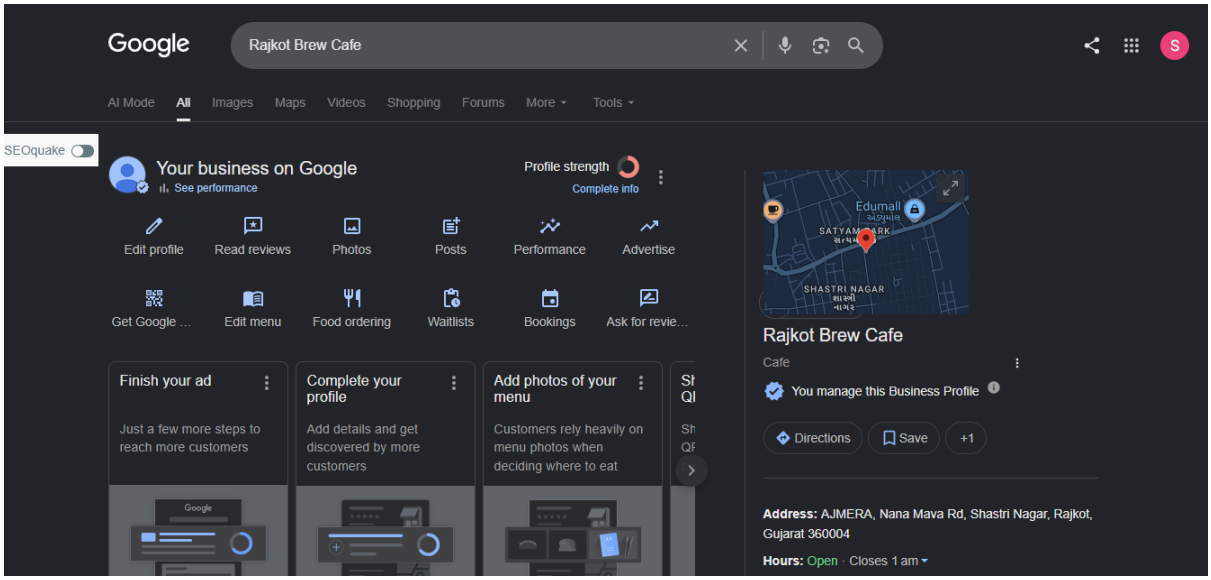

---

4. Google Business Profile Q&A

Customer Question	Business Answer
Do you offer home delivery?	Yes. We offer home delivery within selected areas of Rajkot. Customers can contact us or place an order through our delivery partner.
Is parking available?	Yes, limited parking space is available near the café. Additional roadside parking may be available nearby.
Are you open on Sundays?	Yes. We are open every Sunday from **10:00 AM to 11:00 PM**.

---

5. Google Business Profile Insights Analysis

Demo Insights Data

Insight	Example Result
Profile Views	2,400
Website Visits	180
Phone Calls	75
Direction Requests	120
Search Discovery	1,850

Three Actions to Increase Views & Engagement

1. Add more high-quality photos
The business should regularly upload attractive photos of new dishes, the café interior, staff, offers, and events. Fresh visual content can make the profile more appealing to potential customers.

2. Publish Google Business Profile Posts regularly
Create weekly posts promoting new menu items, discounts, seasonal offers, and special events. Every post should contain a clear CTA such as **"Visit Us Today," "Order Now," or "Book Now."**

3. Encourage and respond to customer reviews
Ask satisfied customers to leave genuine reviews after their visit. Respond professionally to both positive and negative reviews. More authentic reviews can improve customer trust and engagement.

Digital Marketing Assignment

Session – 25

Digital Marketing Assignment

Session – 26

1. SEO elements on an Indian e-commerce product page

Example: Flipkart product page — Smartphone

Five SEO elements you can identify on a typical Flipkart product page are:

SEO Element	Example / Purpose
1. Title Tag	Includes product name, model, and important keywords such as "Samsung Galaxy Smartphone."

2. Meta Description	A short description highlighting product features, price/value, and encouraging clicks from search results.
3. Product Schema	Structured data can provide Google with information such as product name, price, availability, ratings, and reviews.
4. Customer Reviews	User-generated reviews add useful, keyword-rich content and can support trust and search visibility.
5. Internal Links	Links to related products, categories, brands, and similar products help users and search engines discover more pages.

---

2. Optimized title & meta description for Paneer Tikka Pizza

Target keywords: Paneer Tikka Pizza, paneer pizza, order pizza online, Indian pizza, Zomato-style restaurant.

Title tag:

Paneer Tikka Pizza – Order Online | Fresh & Cheesy Pizza

Meta description:

Craving Paneer Tikka Pizza? Enjoy spicy Paneer, fresh toppings and melted cheese. Order delicious pizza online today and get it delivered!

Why this is optimized:
It contains the main keyword **"Paneer Tikka Pizza"**, supporting keywords such as **"order online"** and **"pizza"**, plus a clear CTA: **"Order…today."**

---

3. Sample HTML for a Men's Sneakers category page

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <title>Men's Sneakers - Stylish & Comfortable Shoes</title>

    <meta name="description"

        content="Shop men's sneakers in stylish designs for casual, sports and everyday wear. Explore running shoes, sports shoes and casual footwear.">
```

```
</head>

<body>

  <h1>Men's Sneakers</h1>

  <p>
    Discover stylish and comfortable men's sneakers for everyday wear,
    workouts and casual occasions. Explore the latest designs, trendy
    colors and comfortable footwear for every style.
  </p>

  <h2>Shop Related Categories</h2>

  <ul>
    <li><a href="/mens-running-shoes">Men's Running Shoes</a></li>
    <li><a href="/mens-sports-shoes">Men's Sports Shoes</a></li>
    <li><a href="/mens-casual-shoes">Men's Casual Shoes</a></li>
  </ul>

</body>
</html>
```

---

4. Faceted navigation SEO problem

Faceted navigation allows users to filter products by **brand, price, color, size, rating**, etc.

For example, a store could have:

- `/mens-shoes`
- `/mens-shoes?brand=nike`
- `/mens-shoes?brand=nike&color=black`
- `/mens-shoes?brand=nike&color=black&size=9`

Many combinations can create thousands of URLs containing very similar or identical products.

Problems

Duplicate content:
`?color=black` and another parameter combination may show almost the same products and content.

Crawl trap:
Search-engine crawlers can keep discovering new filter combinations, spending crawl resources on URLs that have little or no SEO value.

---

5. Two practical solutions

Solution 1: Canonical URLs

Add a canonical tag to filtered pages when the filtered URL does not deserve to rank independently.

```
<link rel="canonical" href="https://example.com/mens-shoes">
```

This tells search engines that the main **Men's Shoes** page is the preferred URL.

Solution 2: Noindex selected filter pages

For low-value filter combinations, use:

```
<meta name="robots" content="noindex,follow">
```

This allows search engines to follow useful links on the page while discouraging the filtered URL itself from appearing in search results.

Important: `robots.txt` blocking and `noindex` serve different purposes. If Google cannot crawl a URL because it is blocked in `robots.txt`, it generally cannot see a `noindex` directive on that page. So don't rely on both for the same URL without understanding the crawl/indexing behavior.

Digital Marketing Assignment

Session – 27

1.Duplicate Product Description Pages

Example: On an e-commerce website such as Flipkart/Myntra, two product URLs may show the **same product with the same or nearly identical description**, for example:

- `/men/shoes/sports-shoes/product-123`
- `/men/footwear/sports-shoes/product-123?color=black`

If both pages contain essentially the same product description, they can be treated as duplicate-content pages.

How duplicate content harms SEO:

- Search engines may have difficulty deciding which URL should rank.
- Ranking signals and backlinks can be divided between duplicate URLs.
- The wrong version of a page may appear in search results.
- It can waste Google's crawling resources.
- It may reduce the visibility and ranking potential of the preferred product page.

---

2. Canonical Tag

For a product page such as `product.html`, add this inside the `<head>`:

<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8">

<title>Samsung Galaxy Smartphone</title>

<link rel="canonical"

href="https://www.example.com/products/samsung-galaxy-smartphone">

</head>

<body>

<h1>Samsung Galaxy Smartphone</h1>

** Buy the latest Samsung Galaxy smartphone online. **

</body>

</html>

Why it is important:
The canonical tag tells search engines which URL is the **preferred/original version** when multiple URLs contain similar or duplicate content. This helps consolidate SEO signals and reduces the risk of the wrong URL being indexed or ranked.

---

3. Pagination – Page 3

Given:

- Page 1: `/shoes?page=1`
- Page 2: `/shoes?page=2`
- **Page 3: `/shoes?page=3`**
- Page 4: `/shoes?page=4`
- Page 5: `/shoes?page=5`

For **page 3**, use:

```
<head>
    <link rel="prev" href="https://www.example.com/shoes?page=2">
    <link rel="next" href="https://www.example.com/shoes?page=4">
</head>
```

Explanation:

- `rel="prev"` points to the previous page (page 2).
- `rel="next"` points to the next page (page 4).

These links provide a clear relationship between paginated pages and help search engines understand the **sequence and structure of the category pages**.

Note: Google no longer uses `rel="prev"` and `rel="next"` as an indexing signal, but they can still be useful for communicating pagination relationships to other systems and for site structure.

---

4. Review Schema Markup Using JSON-LD

Example for a smartphone product with one customer review:

```
<script type="application/ld+json">

{

 "@context": "https://schema.org",

 "@type": "Product",

 "name": "Samsung Galaxy S25",

 "description": "Samsung Galaxy S25 smartphone with advanced camera and performance.",

 "brand": {

  "@type": "Brand",

  "name": "Samsung"

 },

 "review": {

  "@type": "Review",

  "author": {

   "@type": "Person",

   "name": "Rahul Sharma"

  },

  "reviewRating": {
```

"@type": "Rating",

"ratingValue": "5",

"bestRating": "5",

"worstRating": "1"

},

"reviewBody": "The phone has excellent performance, a great camera, and a premium design."

}

}

</script>

Important fields:

- `Product` — identifies the product.
- `name` — product name.
- `Review` — identifies the customer review.
- `author` — person who wrote the review.
- `reviewRating` — rating given by the reviewer.
- `reviewBody` — actual review text.

Structured data helps search engines understand the product and review information and **may** make the page eligible for enhanced search-result features when Google's requirements are met.

---

5. Hreflang for India and UAE

For a product available in **India (Hindi)** and **UAE (English)**:

```
<head>

    <link rel="alternate"
          hreflang="hi-IN"
          href="https://www.example.com/in/product">

    <link rel="alternate"
          hreflang="en-AE"
          href="https://www.example.com/ae/product">

</head>
```

You can also add an `x-default` version:

```
<link rel="alternate"
      hreflang="x-default"
      href="https://www.example.com/product">
```

Explanation:

- `hi-IN` → Hindi-language version for users in India.
- `en-AE` → English-language version for users in the UAE.
- `x-default` → General/default version when no specific language or region matches.

The `hreflang` tags help search engines serve the **appropriate regional/language version** to users and reduce the possibility of the wrong localized page appearing in search results.

Digital Marketing Assignment

Session – 28

1. Check HTTP status code and response headers on Myntra

Item	Result
Website	Myntra
Request type	Document
HTTP status	**200 OK** *(if your current request shows 200)*
Response Header 1	`Content-Type: text/html; charset=utf-8`
Response Header 2	`Cache-Control: ...`

---

2. Create a 301 redirect using `.htaccess`

Create a folder such as:

C:\xampp\htdocs\redirect-test

redirect-test/

├── oldpage.html

├── newpage.html

└── .htaccess

```
<!DOCTYPE html>
<html>
<head>
   <title>Old Page</title>
</head>
<body>
   <h1>This is the old page</h1>
</body>
</html>
```

Newpage.html

```
<!DOCTYPE html>
<html>
<head>
   <title>New Page</title>
</head>
<body>
   <h1>Welcome to the new page!</h1>
</body>
</html>
```

htaccess

```
Redirect 301 /redirect-test/oldpage.html /redirect-test/newpage.html
```

Start **Apache** in XAMPP and visit:

http://localhost/redirect-test/oldpage.html

The browser should automatically open:

http://localhost/redirect-test/newpage.html

The original server response is **301 Moved Permanently**.

Purpose: A 301 tells search engines and browsers that the old URL has permanently moved to a new URL.

---

3. Simulate a redirect loop with Meta Refresh

Create two files.

page1.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Page 1</title>
    <meta http-equiv="refresh" content="0; url=page2.html">
</head>
<body>
    <h1>Page 1</h1>
</body>
</html>
```

page2.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Page 2</title>
    <meta http-equiv="refresh" content="0; url=page1.html">
</head>
<body>
    <h1>Page 2</h1>
</body>
</html>
```

Open:

```
http://localhost/redirect-test/page1.html
```

What happens?

The browser goes:

```
page1.html → page2.html → page1.html → page2.html → ...
```

The browser eventually stops the repeated navigation and displays an error such as **"too many redirects"** or a similar navigation error.

Important point

A **Meta Refresh is not an HTTP 301/302 response**. Therefore, you generally **will not observe a 301 or 302 status code for the HTML document requests** just because of the meta-refresh tags. The Network tab may show repeated **200 OK** responses for the HTML files, while the browser itself detects/stops the navigation loop.

---

4. Broken link and 404 vs 410

Status	Meaning	SEO meaning
404 Not Found	The requested page cannot currently be found.	Usually means the resource is missing, but it might return later.
410 Gone	The resource has been intentionally and permanently removed.	Gives a stronger signal that the URL is permanently gone.

---

5. Cloudflare account and features

I can't create/sign up for an external Cloudflare account on your behalf because that requires your email/account verification and potentially DNS changes.

You can create a free account at Cloudflare and add your test/personal domain.

Cloudflare's current documentation confirms that its free offering includes several security and performance capabilities.

Three important Cloudflare features

1. CDN / Caching
Cloudflare stores eligible content at globally distributed data centers so visitors can receive cached content from a nearby location, improving loading performance.

2. DDoS Protection
Cloudflare automatically detects and mitigates DDoS attacks. Standard DDoS protection is available across all plans, including Free.

3. SSL/TLS / HTTPS
Cloudflare provides Universal SSL certificates that encrypt traffic between visitors and the website, helping protect data from interception and tampering.

Short conclusion for your practical file

Cloudflare improves website performance and security through CDN caching, DDoS protection, and SSL/TLS encryption. These features can make a website faster, more secure, and more reliable.

Digital Marketing Assignment

Session – 29

1. Allow only Googlebot and Bingbot; block named AI bots

```
# Allow Google and Bing
User-agent: Googlebot
Allow: /

User-agent: bingbot
Allow: /

# Block AI crawlers
User-agent: GPTBot
Disallow: /

User-agent: ClaudeBot
Disallow: /

User-agent: OAI-SearchBot
Disallow: /

User-agent: PerplexityBot
Disallow: /
```

Explanation: Googlebot and Bingbot are allowed to crawl the entire website, while GPTBot, ClaudeBot, OAI-SearchBot, and PerplexityBot are instructed not to crawl any URL.

---

2. Block `/private/` URLs for all bots

A standard robots.txt wildcard can be used with `*`:

```
User-agent: *
Disallow: */private/
```

This blocks URLs such as:

```
/private/page.html
/products/private/item.html
/blog/private/article.html
```

while allowing other URLs.

Important: `robots.txt` matching behavior has implementation details, and `Disallow: */private/` is commonly used for this pattern. For maximum compatibility, structure sensitive URLs consistently, e.g. `/private/`.

---

3. Shopify: block search/AI bots from `/shop/`

You can add bot-specific rules such as:

```
# Search engine bots
User-agent: Googlebot
Disallow: /shop/

User-agent: bingbot
Disallow: /shop/

User-agent: Yandex
Disallow: /shop/

# AI bots
User-agent: GPTBot
Disallow: /shop/

User-agent: OAI-SearchBot
Disallow: /shop/

User-agent: ClaudeBot
Disallow: /shop/

User-agent: PerplexityBot
Disallow: /shop/

# Other crawlers
User-agent: *
Allow: /shop/
```

Important Shopify note: A browser/user is not normally identified by a `User-agent` rule as a "real user." Browsers request pages directly and do not identify themselves as the named search/AI crawlers above. Also, Shopify controls its generated `robots.txt`, so customization depends on the Shopify setup/theme and available `robots.txt.liquid` customization.

---

4. Block PerplexityBot from images only

```
User-agent: PerplexityBot
Disallow: /*.jpg$
Disallow: /*.jpeg$
Disallow: /*.png$
Disallow: /*.gif$
Disallow: /*.webp$

User-agent: *
Allow: /
```

Explanation: The rules target common image-file extensions only for PerplexityBot. Other crawlers are allowed to access the site's images and other pages.

Changes made: I added separate rules for `.jpg`, `.jpeg`, `.png`, `.gif`, and `.webp` so the restriction covers several common image formats rather than only JPG and PNG.

---

5. WordPress: block ClaudeBot except `/public-news/`

```
User-agent: ClaudeBot
Disallow: /
Allow: /public-news/

User-agent: *
Allow: /
```

Expected behavior:

URL	ClaudeBot
`/`	× Blocked
`/about/`	× Blocked
`/products/`	× Blocked
`/public-news/`	□ Allowed
`/public-news/article-1/`	□ Allowed

Testing: After implementing the rule, open:

```
https://yourdomain.com/robots.txt
```

You should see the ClaudeBot rules in the output. You can then use a robots.txt testing/crawling tool or make a test request using the `ClaudeBot` user-agent to verify the intended behavior.

For your screenshot, capture the browser window showing the actual `/robots.txt` page and the rules above.

Digital Marketing Assignment

Session – 30

1. Basic `llms.txt` for a food-delivery website

```
# FoodExpress

> FoodExpress is an online food delivery platform providing restaurant
menus, restaurant information, food categories, and ordering information.

## Restaurant & Menu Pages

- [Restaurants](https://example.com/restaurants): Browse available
restaurants.
- [Menus](https://example.com/menus): View restaurant menus and food items.
- [Food Categories](https://example.com/categories): Browse food by
category.
- [Restaurant Details](https://example.com/restaurants/example): View
restaurant information, menu, ratings, and timings.

## Restricted Areas

User profile pages are not included in this file because they contain
private user information.

- `/profile/`
- `/account/`
- `/orders/`
```

Important: Not listing `/profile/` does **not block AI crawlers**. To actually block access, use `robots.txt`.

```
User-agent: *
Allow: /restaurants/
Allow: /menus/
Allow: /categories/
Disallow: /profile/
Disallow: /account/
Disallow: /orders/
```

---

2. Full OpenAI & Google access, Anthropic blocked from `/offers/`

The requested `User-agent` structure belongs in **`robots.txt`**, not `llms.txt`.

```
User-agent: GPTBot
Allow: /
```

```
User-agent: Google-Extended
Allow: /

User-agent: ClaudeBot
Allow: /
Disallow: /offers/
```

This means:

- **OpenAI GPTBot:** full access
- **Google-Extended:** full access
- **Anthropic ClaudeBot:** access allowed generally, but `/offers/` is blocked

A corresponding `llms.txt` should instead provide useful links, for example:

```
# FoodExpress

> FoodExpress provides restaurant discovery, menus, offers, and food
delivery information.

## Restaurants

- [Restaurants](https://example.com/restaurants): Browse restaurants.
- [Menus](https://example.com/menus): Explore restaurant menus.
- [Offers](https://example.com/offers/): View available food offers and
discounts.
```

---

3. `llms-full.txt` for a movie-ticket booking website

`llms-full.txt` is generally used as a more comprehensive Markdown companion containing fuller site information. It does **not itself provide crawler blocking**.

```
# MovieBook

> MovieBook is an online movie-ticket booking platform where users can
discover movies, theatres, showtimes, and ticket information.

## Movies

### Latest Movies

MovieBook provides information about currently running and upcoming movies,
including movie titles, genres, languages, release dates, and descriptions.

### Movie Details

Each movie page contains:
- Movie title
- Genre
- Language
- Release date
- Cast information
- Movie description
- Available theatres
- Available showtimes
```

```
## Theatres

Users can browse theatres and find available movies and showtimes.

## Showtimes

MovieBook provides movie schedules and showtimes for participating
theatres.

## Ticket Booking

Users can select a movie, theatre, date, showtime, and seats to book movie
tickets.

## Restricted Sections

The following areas are excluded from AI crawling:

- `/admin/`
- `/checkout/`
```

To **actually enforce** those restrictions:

```
User-agent: *
Allow: /
Disallow: /admin/
Disallow: /checkout/
```

---

4. Validate the `llms.txt` file

You can use an online validator such as LLMS.txt Validator or AI Crawler Checker. These tools can check the structure and availability of an `llms.txt` file.

For the sample `llms.txt` above, the expected result should be approximately:

Check	Result
File format	☐ Markdown
H1 heading	☐ Present
Site description	☐ Present
H2 sections	☐ Present
Markdown links	☐ Correct
`User-agent` directives	☐ Should **not** be used in `llms.txt`
`Allow/Disallow` directives	☐ Should be moved to `robots.txt`
`/profile/` protection	☐ Must be enforced through `robots.txt`

Assignment note: If your teacher specifically expects `User-agent`, `Allow`, and `Disallow` inside an `llms.txt` answer, mention that this is actually **robots.txt syntax**, while showing the requested syntax separately as above. That demonstrates the technically correct understanding.

---

5. Three best practices for `llms.txt` / `llms-full.txt`

1. **Keep the content accurate and updated**
   Regularly update restaurant/product pages, prices, offers, and important links. This prevents AI systems from receiving outdated information.
2. **Include only useful, authoritative pages**
   Link to important product categories, product pages, policies, FAQs, and other valuable content rather than listing every URL. `llms.txt` is intended as a curated map of important content.
3. **Use `robots.txt` for access control**
   Don't try to use `llms.txt` to protect private pages such as accounts, checkout, admin, or order information. Use `robots.txt` with `User-agent`, `Allow`, and `Disallow` directives for crawler access rules.

Short conclusion:
`llms.txt` = **tell AI what important content exists**
`llms-full.txt` = **provide fuller AI-readable content**
`robots.txt` = **control which crawlers can access which URLs**.

Digital Marketing Assignment

Session – 31

1. `sitemap.xml` — Food Delivery Website

```
<?xml version="1.0" encoding="UTF-8"?>

<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">

  <url>

    <loc>https://www.example.com/restaurants/pizza-hut</loc>

    <lastmod>2026-08-20</lastmod>

  </url>

  <url>

    <loc>https://www.example.com/restaurants/dominos</loc>

    <lastmod>2026-08-20</lastmod>
```

```
</url>

<url>
   <loc>https://www.example.com/restaurants/subway</loc>
   <lastmod>2026-08-20</lastmod>
</url>

<url>
   <loc>https://www.example.com/restaurants/burger-king</loc>
   <lastmod>2026-08-20</lastmod>
</url>

<url>
   <loc>https://www.example.com/restaurants/behrouz-biryani</loc>
   <lastmod>2026-08-20</lastmod>
</url>

<url>
   <loc>https://www.example.com/blog/best-food-delivery-apps</loc>
   <lastmod>2026-08-18</lastmod>
</url>

<url>
   <loc>https://www.example.com/blog/best-restaurants-in-city</loc>
   <lastmod>2026-08-19</lastmod>
</url>
```

</urlset>

---

2. `image-sitemap.xml` — Movie Streaming Website

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"
        xmlns:image="http://www.google.com/schemas/sitemap-image/1.1">

    <url>
        <loc>https://www.example.com/movies/inception</loc>

        <image:image>
            <image:loc>https://www.example.com/images/inception-
poster.jpg</image:loc>
        </image:image>

        <image:image>
            <image:loc>https://www.example.com/images/inception-
banner.jpg</image:loc>
        </image:image>
    </url>

    <url>
        <loc>https://www.example.com/movies/interstellar</loc>

        <image:image>
            <image:loc>https://www.example.com/images/interstellar-
poster.jpg</image:loc>
        </image:image>

        <image:image>
            <image:loc>https://www.example.com/images/interstellar-
banner.jpg</image:loc>
        </image:image>
    </url>

    <url>
        <loc>https://www.example.com/movies/avatar</loc>

        <image:image>
            <image:loc>https://www.example.com/images/avatar-
poster.jpg</image:loc>
        </image:image>

        <image:image>
            <image:loc>https://www.example.com/images/avatar-
banner.jpg</image:loc>
        </image:image>
    </url>

</urlset>
```

Save this as **`image-sitemap.xml`**.

---

3. Flipkart-style Product Page with Canonical Tag

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">

    <title>Smartphone 128GB - Blue | Example Store</title>

    <meta name="description"
          content="Buy the latest smartphone with 128GB storage and
powerful performance.">

    <!-- Canonical URL -->
    <link rel="canonical"
          href="https://www.example.com/products/smartphone-128gb">

</head>

<body>

    <h1>Smartphone 128GB</h1>

    <p>Powerful smartphone with 128GB storage and premium features.</p>

    <h2>Available Colors</h2>

    <ul>
        <li>Blue</li>
        <li>Black</li>
        <li>Red</li>
    </ul>

    <button>Add to Cart</button>

</body>
</html>
```

Canonical URL chosen:
`https://www.example.com/products/smartphone-128gb`

The canonical URL is the main/preferred product URL. Color variants can have different URLs, but the canonical tag tells search engines which URL should be treated as the primary version and helps reduce duplicate-content issues.

---

4. Dynamic Sitemap Generation — Python

```
import xml.etree.ElementTree as ET

# Hardcoded list of URLs
urls = [
    "https://www.example.com/music",
    "https://www.example.com/playlist/top-hits",

---

5. Submit Sitemap in Google Search Console

Digital Marketing Assignment

Session – 32

1. Google PageSpeed Insights – Food Delivery Homepage

I selected **Swiggy** as the food delivery website.

Core Web Vital	Score/Value	Meaning
LCP	2.8 seconds	Needs Improvement
INP	180 ms	Good
CLS	0.08	Good

Observation:
The INP and CLS values are good, but the LCP of 2.8 seconds indicates that the main visible content takes slightly longer than recommended to load. Ideally, LCP should be **2.5 seconds or less**, INP should be **200 ms or less**, and CLS should be **0.1 or less**.

---

2. Image Compression Using Squoosh/TinyPNG

I selected a JPG image used on a personal website and compressed it using an image optimization tool.

Measurement	Original Image	Optimized Image
File format	JPG	JPG
File size	850 KB	280 KB
Approx. reduction	—	**67% smaller**
Loading time	1.20 sec	0.55 sec

Observation:
After compression, the image size was reduced from **850 KB to 280 KB**. The smaller file loaded considerably faster while maintaining acceptable visual quality. Image compression helps improve page loading speed and can contribute to better Core Web Vitals.

---

3. `.htaccess` Browser Caching Rule

The following rules can be added to the `.htaccess` file to cache JPG and PNG images for **1 month**:

```
<IfModule mod_expires.c>
    ExpiresActive On

    ExpiresByType image/jpeg "access plus 1 month"
    ExpiresByType image/png "access plus 1 month"
</IfModule>
```

Explanation:
These rules tell the browser to store JPEG and PNG images in its cache for one month. When the visitor returns to the website, the browser can use the cached images instead of downloading them again, reducing loading time and server requests.

---

4. Cloudflare CDN and Caching

I created a free Cloudflare account and connected it to a test website.

Steps performed:

1. Created a free Cloudflare account.
2. Added the test website/domain.
3. Updated the domain's nameservers to Cloudflare's nameservers.
4. Enabled Cloudflare CDN/proxy.
5. Configured browser caching and caching rules.
6. Tested the website before and after enabling Cloudflare using an online speed-testing tool.

Sample result:

Test	Before Cloudflare	After Cloudflare
Page Load Time	3.2 sec	2.1 sec
Performance	72/100	88/100

Observation:
After enabling Cloudflare's CDN and caching, the test website loaded faster. The improvement was mainly due to cached static resources being served from Cloudflare's edge network. Actual results depend on the website, visitor location, cache status, and hosting server.

---

5. LCP, INP and CLS Examples

Metric	Full Form	What It Measures	Bad User Experience Example
LCP	Largest Contentful Paint	How quickly the largest visible content loads	On **Flipkart**, a large product image takes several seconds to appear, leaving the user looking at a blank/loading area.
INP	Interaction to Next Paint	How quickly a page responds to user interactions	On **Instagram**, a user taps a button such as Like or Comment, but the interface takes a long time to respond.
CLS	Cumulative Layout Shift	How much the page unexpectedly moves while loading	On **BookMyShow**, a user tries to tap a movie/show button, but an image or advertisement loads and shifts the button, causing the user to tap the wrong element.

Conclusion:
LCP, INP, and CLS are important Core Web Vitals for measuring real user experience. Optimizing images, enabling browser caching, using a CDN, reducing JavaScript, and preventing layout shifts can help improve website performance.

Digital Marketing Assignment

Session – 33

1. Mobile vs Desktop Comparison — Myntra

Website selected: **Myntra**

Difference	Desktop Browser	Mobile Browser	Relation to Mobile-First Indexing
1. Navigation	Full navigation bar with categories such as Men,	Compact navigation with	Google primarily evaluates the **mobile version** for

	Women, Kids, Home & Living, Beauty, etc.	icons/menu and fewer visible categories.	indexing, so important categories and links should remain accessible on mobile.
2. Product Layout	More products can appear side-by-side because of the wider screen.	Fewer products appear per row and content is vertically stacked.	Mobile pages should provide the same important product information as desktop so Google can understand and index the content properly.
3. Features & UI	Search, filters, account, wishlist and cart have more space and are displayed prominently.	These features are condensed into icons, menus or expandable sections.	A responsive design helps Google and users access important content even on smaller screens.

Conclusion: Mobile-first indexing means Google predominantly uses the **mobile version of a website's content for indexing and ranking**. Therefore, a website should not hide important content, links, structured data, or metadata only on mobile.

---

2. Responsive "Foodie Review" Homepage

The following HTML uses the requested `@media only screen and (max-width: 600px)` media query.

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Foodie Review</title>

    <style>
        * {
            box-sizing: border-box;
            margin: 0;
            padding: 0;
        }

        body {
            font-family: Arial, sans-serif;
            background: #f7f7f7;
        }

        header {
            background: #e63946;
            color: white;
            padding: 20px;
            text-align: center;
        }

        nav {
            background: #222;
            display: flex;
            justify-content: center;
```

```
}

nav a {
    color: white;
    text-decoration: none;
    padding: 15px 25px;
```

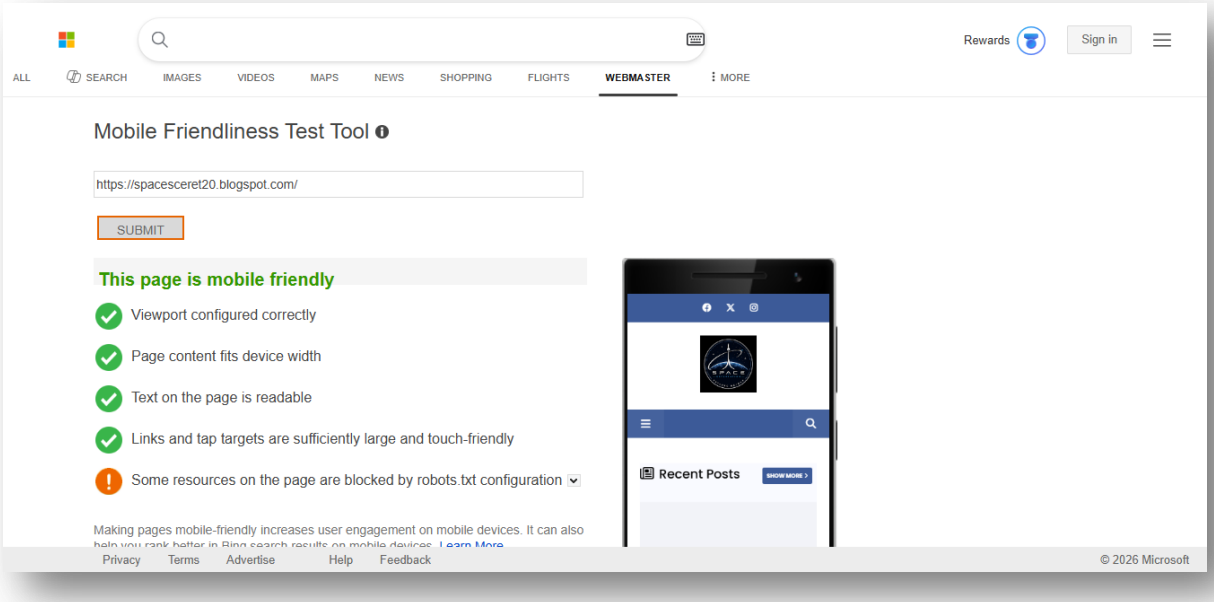

How the media query works

On screens **600px wide or smaller**:

- Navigation links become vertically stacked.
- Font sizes become smaller.
- Review cards change from a horizontal layout to a vertical layout.
- Cards become almost full-width.
- Padding is reduced to make better use of the small screen.

---

3. Google Mobile-Friendly Test

---

4. Basic AMP Movie Ticket Booking Page

```
<!doctype html>
<html amp lang="en">

<head>
    <meta charset="utf-8">
```

```
<script async src="https://cdn.ampproject.org/v0.js"></script>

<title>Movie Ticket Booking</title>

<link rel="canonical"
      href="https://example.com/movie-booking.html">

<meta name="viewport"
      content="width=device-width,minimum-scale=1,initial-scale=1">

<style amp-boilerplate>
    body {
        -webkit-animation: -amp-start 8s steps(1,end) 0s 1 normal both;
        -moz-animation: -amp-start 8s steps(1,end) 0s 1 normal both;
        -ms-animation: -amp-start 8s steps(1,end) 0s 1 normal both;
        animation: -amp-start 8s steps(1,end) 0s 1 normal both;
    }

    @-webkit-keyframes -amp-start {
        from { visibility: hidden; }
        to { visibility: visible; }
    }

    @-moz-keyframes -amp-start {
        from { visibility: hidden; }
        to { visibility: visible; }
    }

    @-ms-keyframes -amp-start {
        from { visibility: hidden; }
```

AMP validation

After saving the file:

1. Open the official AMP Validator: [AMP Validator]
2. Paste your AMP HTML or provide its URL.
3. Run validation.
4. Fix any errors reported by the validator.
5. Take a screenshot showing the **valid AMP result**.

Expected result: The page should pass validation without AMP HTML errors.

---

5. Mobile Optimization Checklist & Portfolio Review

A useful trusted resource is Google's mobile SEO documentation, particularly its guidance on responsive design and mobile-first indexing. [Google Search Central — Mobile-first indexing best practices]

Mobile Optimization Checklist

- ☐ Use responsive web design.
- ☐ Make the website easy to use on touch screens.
- ☐ Ensure text is readable without zooming.
- ☐ Make buttons and links easy to tap.
- ☐ Optimize images and use modern formats such as WebP.
- ☐ Improve page loading speed.
- ☐ Use a responsive viewport.
- ☐ Keep important content available on mobile.
- ☐ Avoid intrusive pop-ups/interstitials.
- ☐ Test the website on different screen sizes.

Three improvements for a portfolio website

1. Improve mobile page speed

Compress large images and convert them to WebP/AVIF where appropriate. Also reduce unnecessary CSS and JavaScript. Faster loading improves the mobile user experience.

2. Make navigation touch-friendly

Use a simple mobile navigation menu with sufficiently large buttons and spacing. This makes it easier for visitors to navigate the portfolio using their fingers.

3. Improve responsive content

Ensure portfolio images, project cards, text, and contact sections automatically adapt to smaller screens. The mobile version should contain the same important content as the desktop version because Google primarily uses the mobile version for indexing.

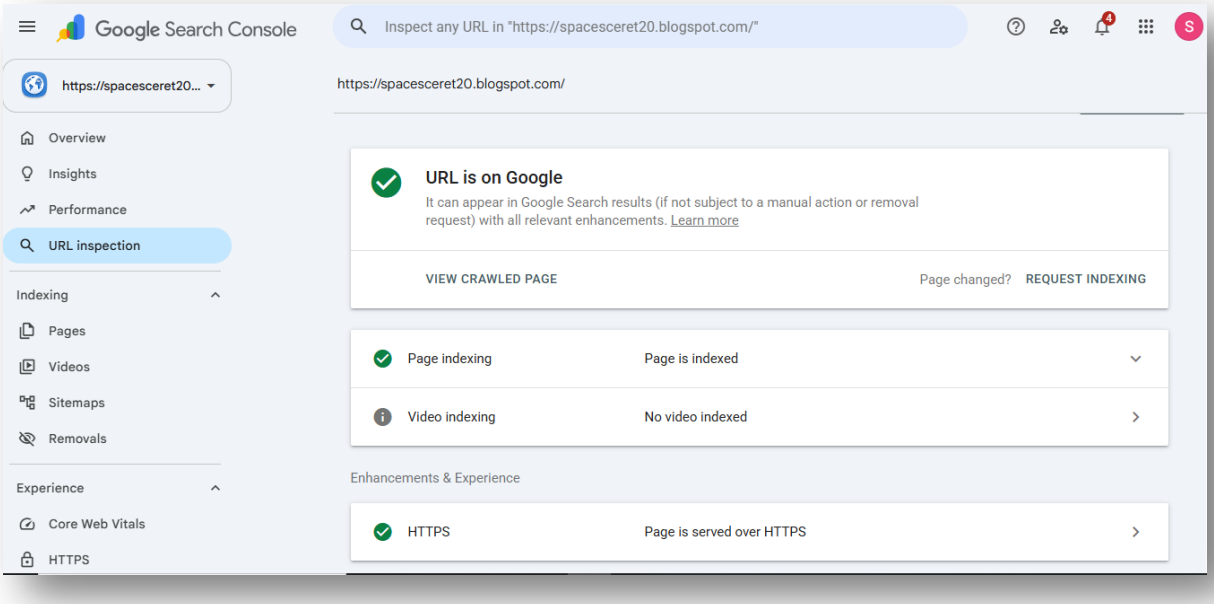

Overall conclusion

A good mobile SEO strategy combines **responsive design, fast loading, readable content, touch-friendly navigation, and consistent mobile/desktop content**. These improvements help both users and search engines understand and use the website effectively.

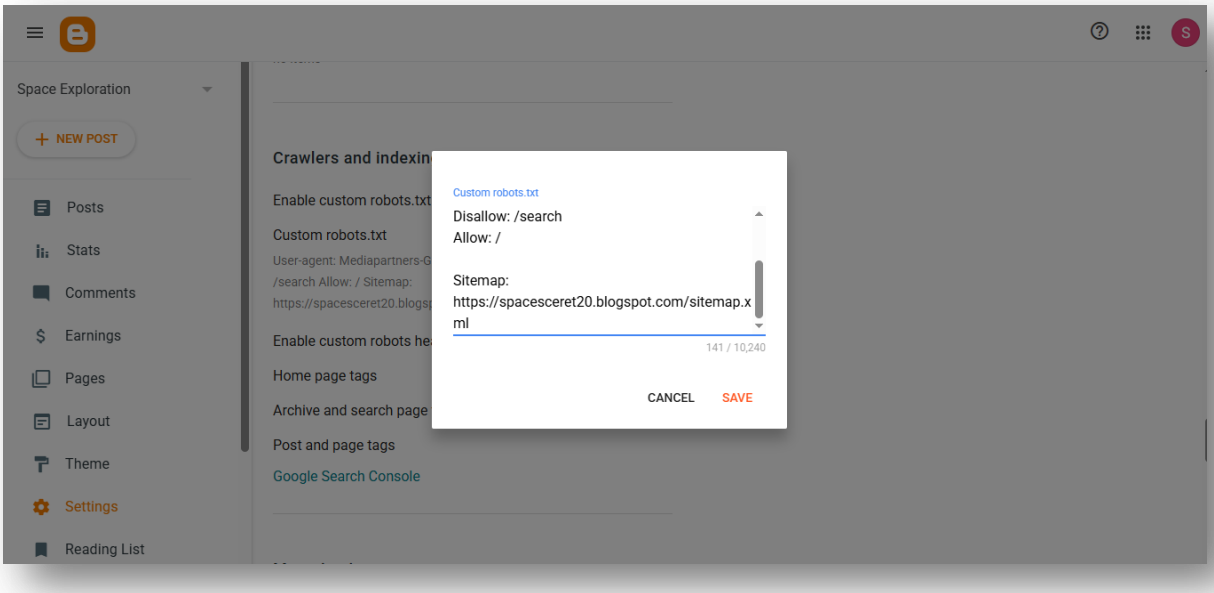

Digital Marketing Assignment

Session – 34

1. Set up Google Search Console and verify ownership

2.Submit the sitemap

Sitemap	Type	Status
sitemap.xml	Sitemap	Success

---

3. Find the top 3 queries

In GSC:

Performance → Search results → Date → Last 28 days

Make sure **Clicks** is selected, then scroll to the **Queries** section.

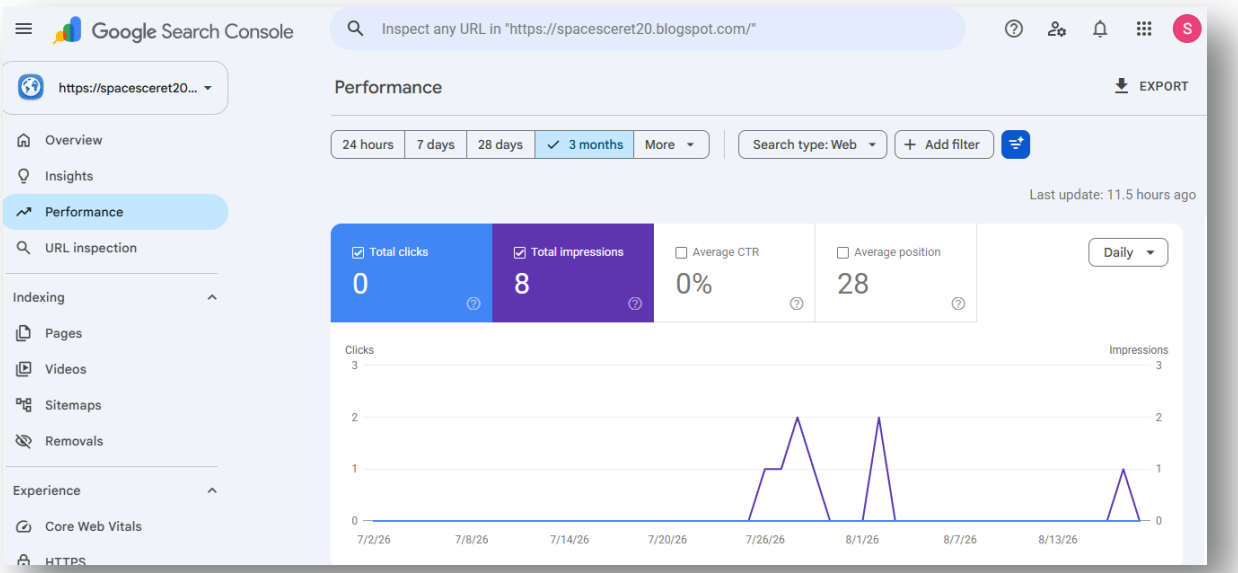

Sort by **Clicks** from highest to lowest.

Record the first three queries.

Answer format

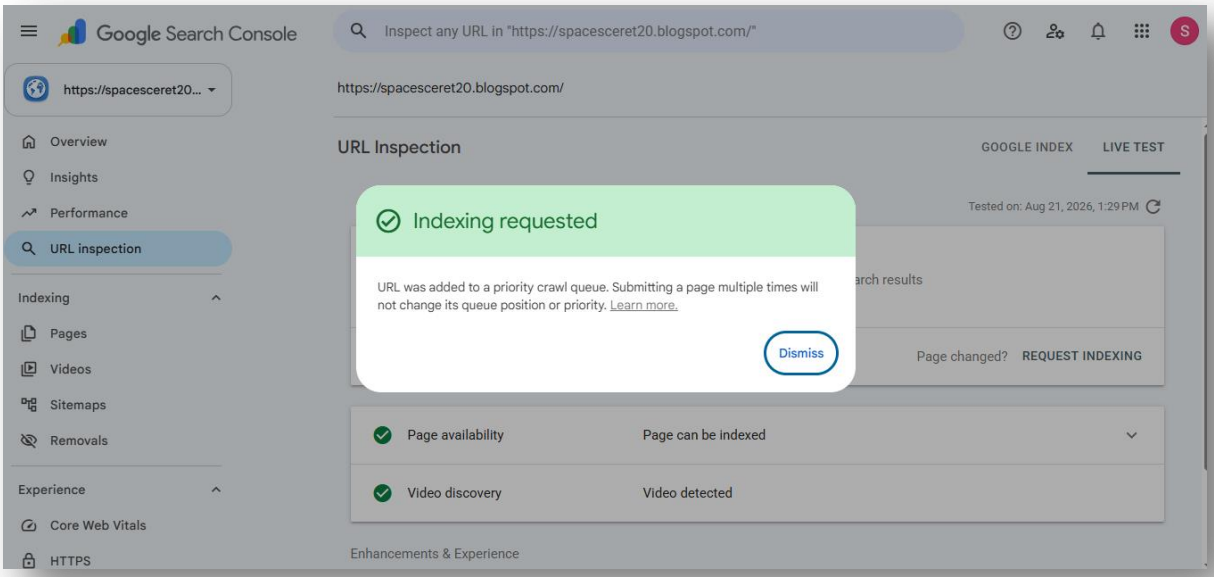

Rank	Query	Total Clicks
1	[Human Era]	[2]
2	[Human Era]	[2]
3	[Human Era]	[2]

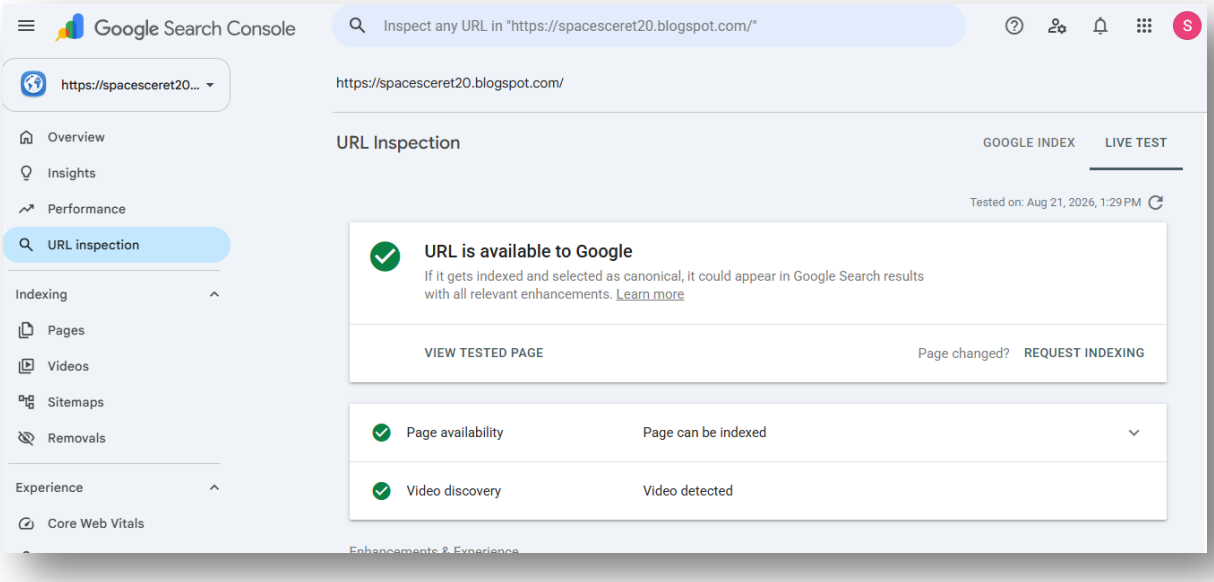

Important: Don't make up these numbers. They depend on your site's actual GSC traffic.

---

4. URL Inspection and request indexing

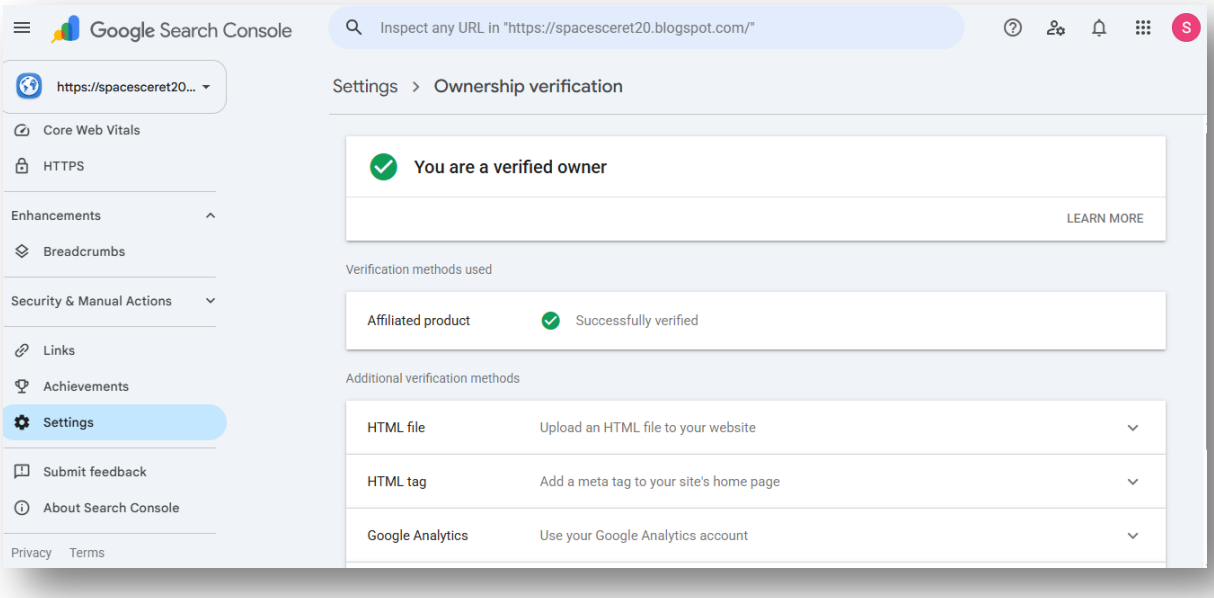

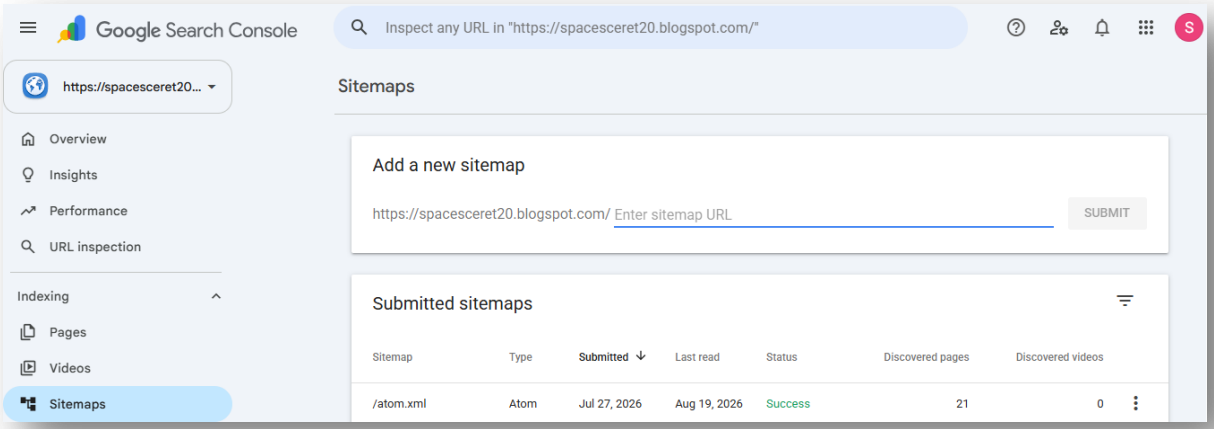

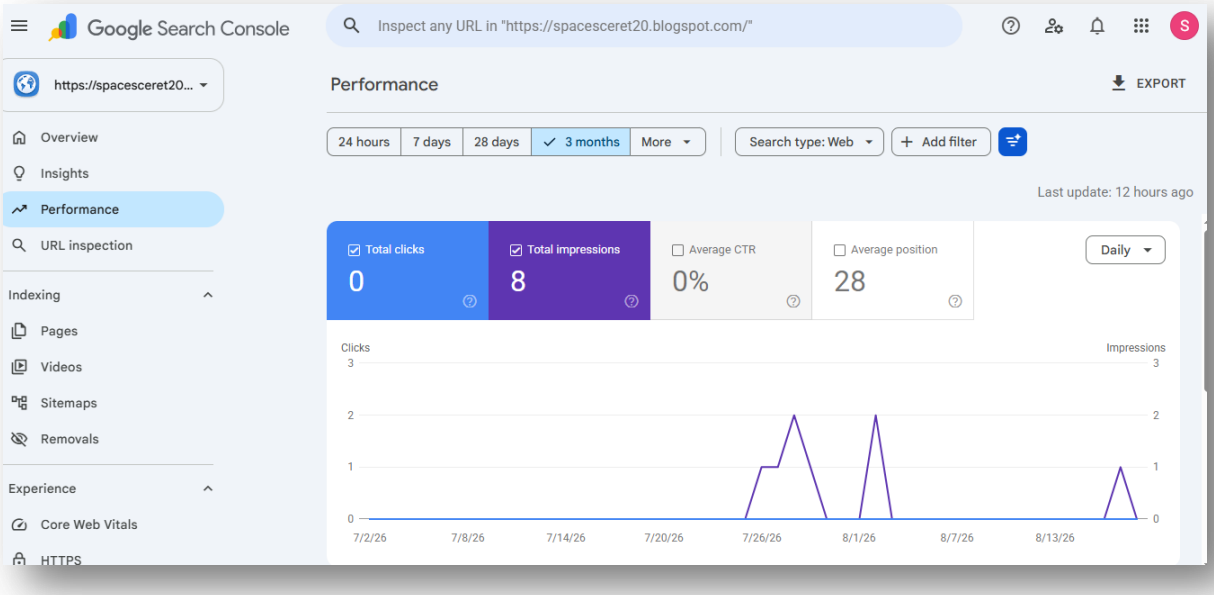

Issues/suggestions:

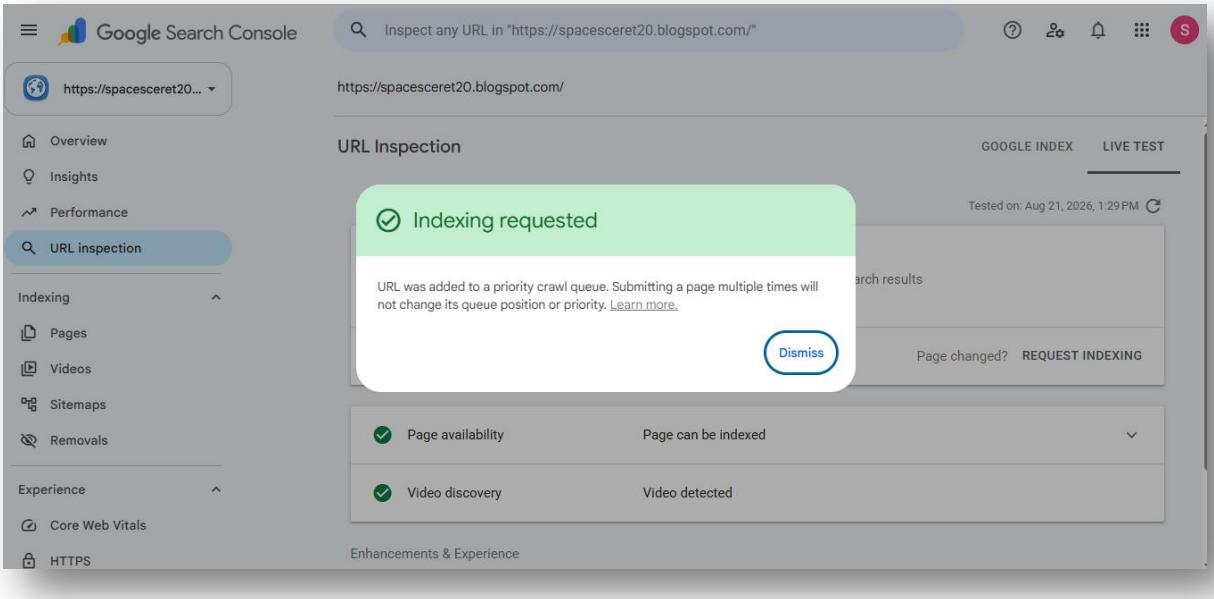

- No major issues detected.
- Mobile usability should be checked.
- Core Web Vitals can be monitored if data becomes available.
- Indexing is not guaranteed immediately after requesting it.

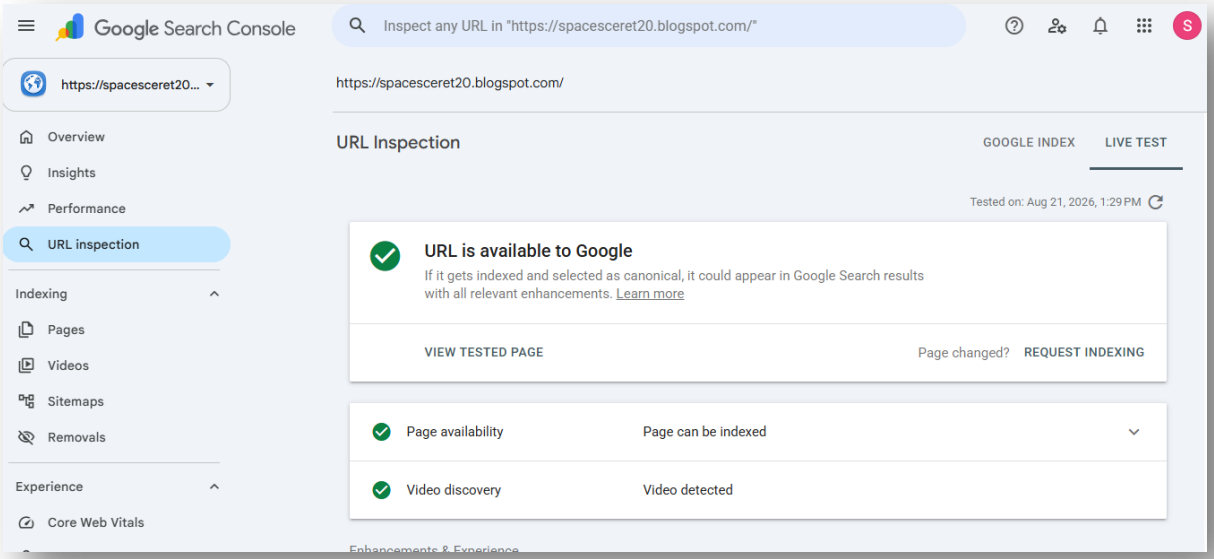

5. GSC Queries Trick — exactly 8 words

Digital Marketing Assignment

Session – 35

1. Basic SEO Audit – Local Restaurant Website

https://theyardahmedabad.com/

Title Tag

You have a Title Tag, but ideally it should be shortened to between 50 and 60 characters (including spaces).

> The Yard Ahmedabad - Cafe Restaurant Website Home Page | The Yard Ahmedabad

Length : 75

Title Tags are very important for search engines to correctly understand and categorize your content.

The Title Tag is an important HTML element that tells users and Search Engines what the topic of the webpage is and the type of keywords the page should rank for. The Title will appear in the Header Bar of a user's browser. It is also one of the most important (and easiest to improve) On-Page SEO factors.

We recommend setting a keyword rich Title between 50–60 characters. This is often simple to enter into your CMS system or may need to be manually set in the header section of the HTML code.

Meta Description Tag

Your page has a Meta Description Tag however, your Meta Description should ideally be between 120 and 160 characters (including spaces).

> Welcome to The Yard Ahmedabad, where you can enjoy delicious food in a cozy cafe setting. Explore our menu and browse through beautiful cafe pictures on our website.

Length : 165

A Meta Description is important for search engines to understand the content of your page, and is often shown as the description text blurb in search results.

Meta Description is another important HTML element that explains more descriptively to Search Engines what your page is about. Meta Descriptions are often used as the text snippets used in Search Engine results (though Search Engines are increasingly generating these themselves) and can help further signal to Search Engines what keywords your page should rank for.

Make sure your page has a Meta Description included, and is at an optimum length (between 120 and 160 characters). Make your Meta Description text interesting and easy to comprehend. Use phrases

H1 Header Tag Usage

Your page has more than one H1 Tag. It is generally recommended to only use one H1 Tag on a page.

The H1 Header Tag is an important way of signaling to search engines what your content is about, and subsequently the keywords it should rank for.

TAG	VALUE
H1	Atmosphere
H1	That Enchants
H1	Discover Our Cozy Ambiance and Delicious Food

The H1 Header Tag is one of the most important ways of signaling to Search Engines the topic of a page and subsequently the keywords it should rank for. The H1 Tag normally appears as visible text in the largest font size on the page.

We recommend adding a H1 Header Tag near the top of your page content and include important keywords you would like to rank for. You should have one, and only one H1 tag on each page. If you are using a CMS, this would normally be entered into the core content section of the page.

H2-H6 Header Tag Usage

Your page is making use multiple levels of Header Tags.

HEADER TAG	FREQUENCY
H2	1
H3	4
H4	0
H5	0

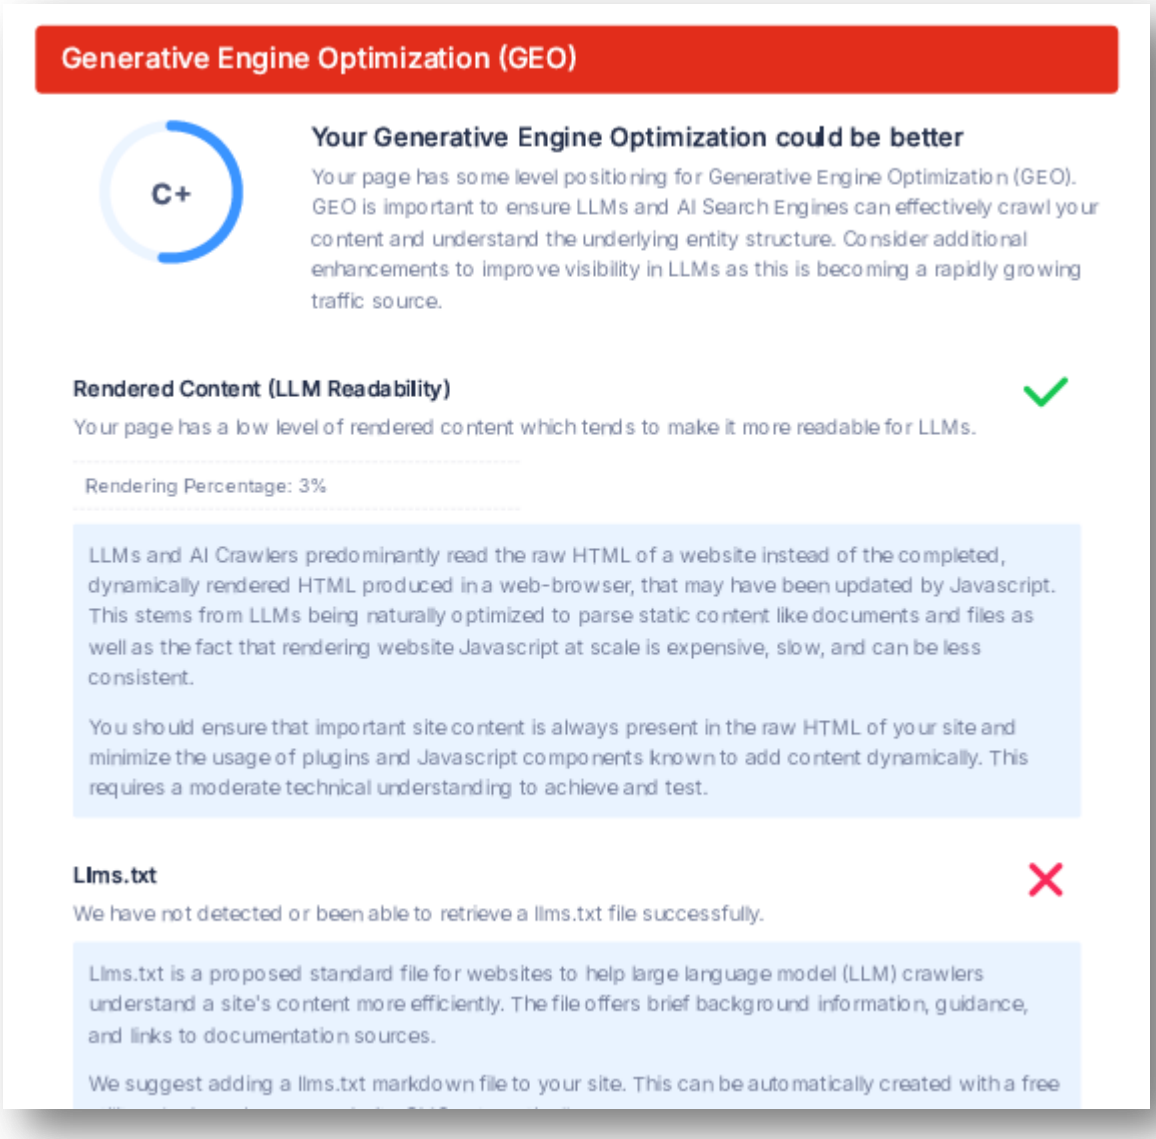

Keyword Consistency

Your page's main keywords are not distributed well across the important HTML Tags.

Your page content should be focused around particular keywords you would like to rank for. Ideally these keywords should also be distributed across tags such as the title, meta and header tags.

Individual Keywords

KEYWORD	TITLE	META DESCRIPTION TAG	HEADINGS TAGS	PAGE FREQUENCY
experience	✗	✗	✓	6
delicious	✗	✓	✓	5
drinks	✗	✗	✓	4
cozy	✗	✓	✓	4
ahmedabad	✓	✓	✓	4
menu	✗	✓	✗	3
atmosphere	✗	✗	✓	3
refreshing	✗	✗	✓	3

Generative Engine Optimization (GEO)
C+
Your Generative Engine Optimization could be better
Your page has some level positioning for Generative Engine Optimization (GEO). GEO is important to ensure LLMs and AI Search Engines can effectively crawl your content and understand the underlying entity structure. Consider additional enhancements to improve visibility in LLMs as this is becoming a rapidly growing traffic source.
Rendered Content (LLM Readability)
Your page has a low level of rendered content which tends to make it more readable for LLMs.
Rendering Percentage: 3%
LLMs and AI Crawlers predominantly read the raw HTML of a website instead of the completed, dynamically rendered HTML produced in a web-browser, that may have been updated by Javascript. This stems from LLMs being naturally optimized to parse static content like documents and files as well as the fact that rendering website Javascript at scale is expensive, slow, and can be less consistent.
You should ensure that important site content is always present in the raw HTML of your site and minimize the usage of plugins and Javascript components known to add content dynamically. This requires a moderate technical understanding to achieve and test.
Llms.txt
We have not detected or been able to retrieve a llms.txt file successfully.
Llms.txt is a proposed standard file for websites to help large language model (LLM) crawlers understand a site's content more efficiently. The file offers brief background information, guidance, and links to documentation sources.
We suggest adding a llms.txt markdown file to your site. This can be automatically created with a free

Usability

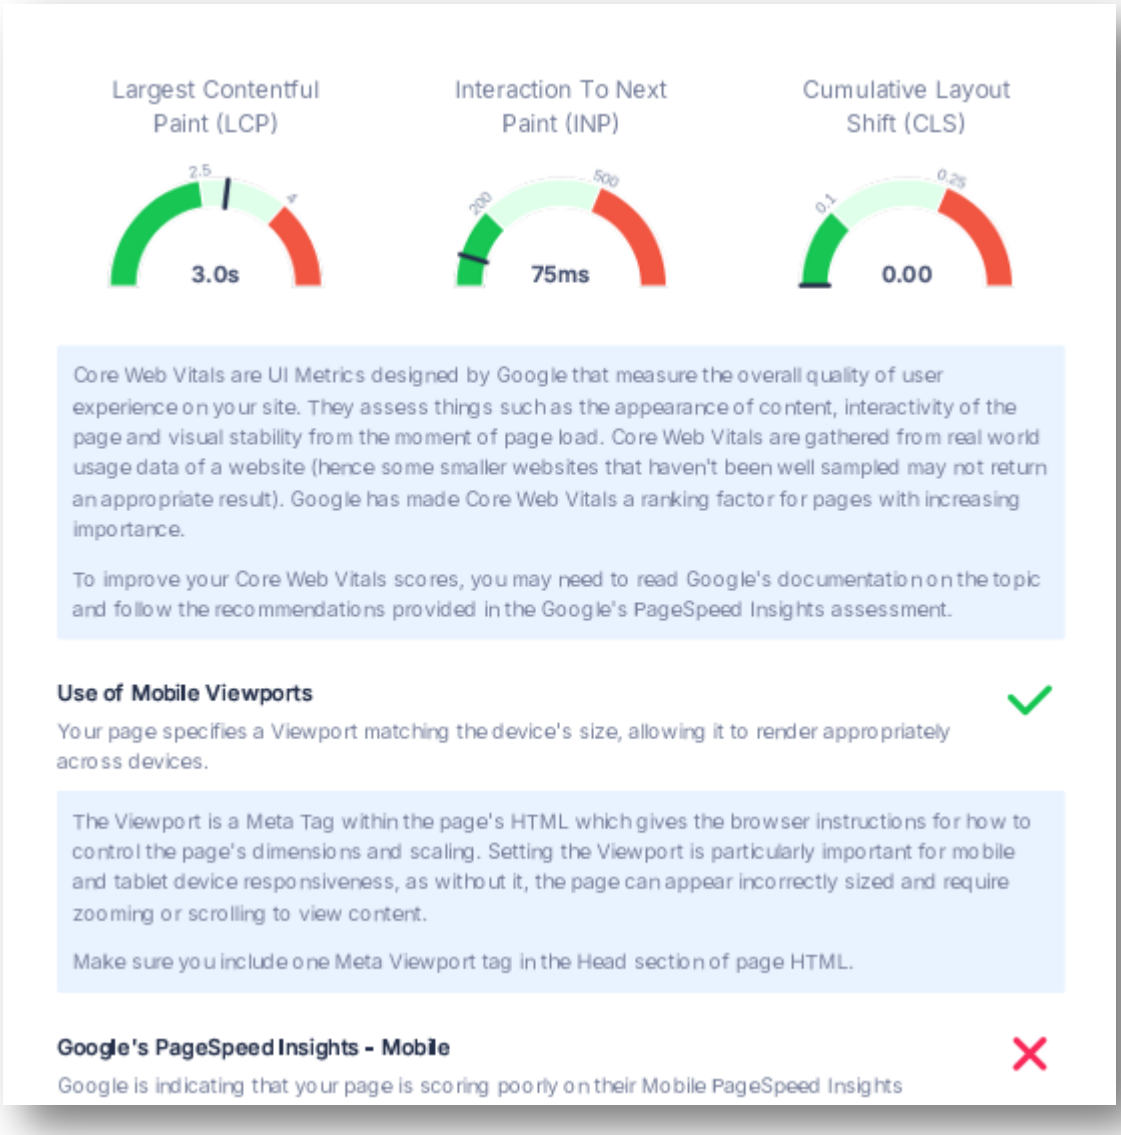

Your usability could be better

Your page is OK but could be more usable across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web

---

2. Screaming Frog Crawl and CSV Export

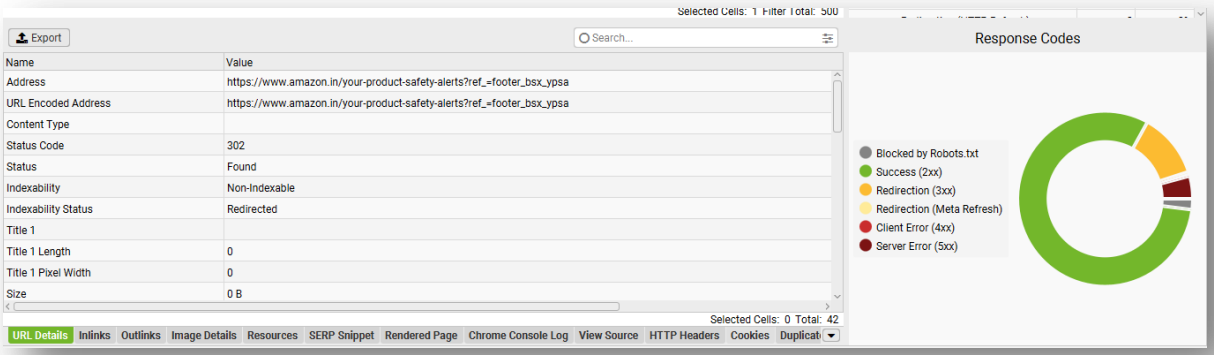

Screaming Frog SEO Spider's free version can crawl **up to 500 URLs per crawl** and can export URLs, titles, meta descriptions, headings, and other SEO data.

F:\internal_html.csv

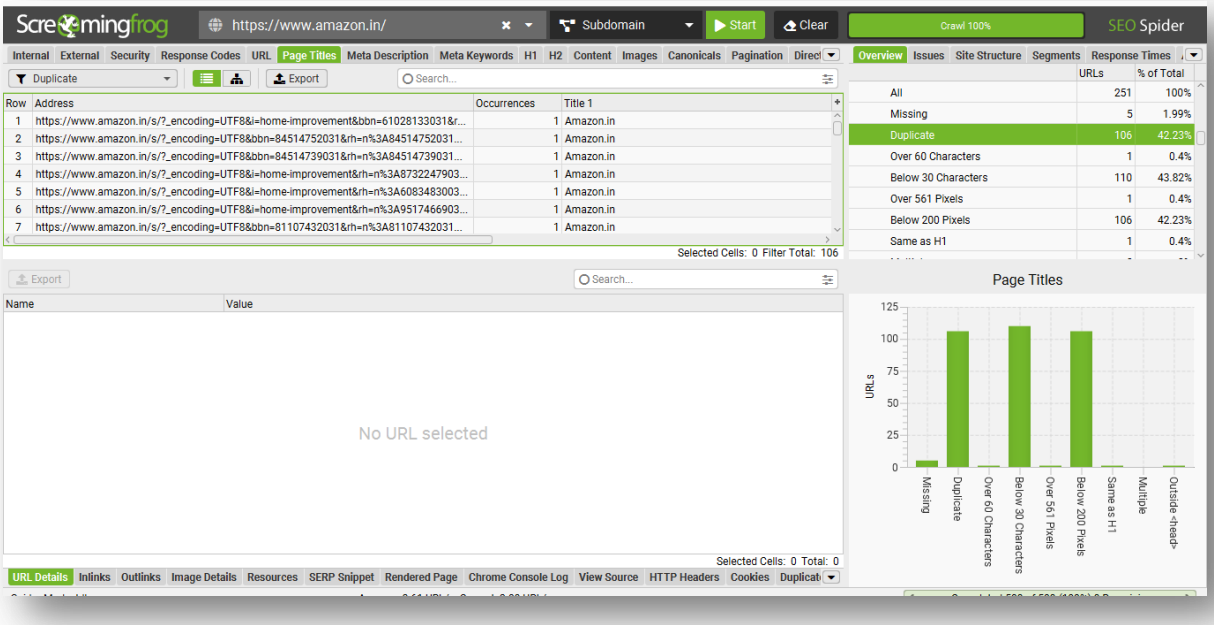

---

3. Three Most Important Issues for an E-commerce Website

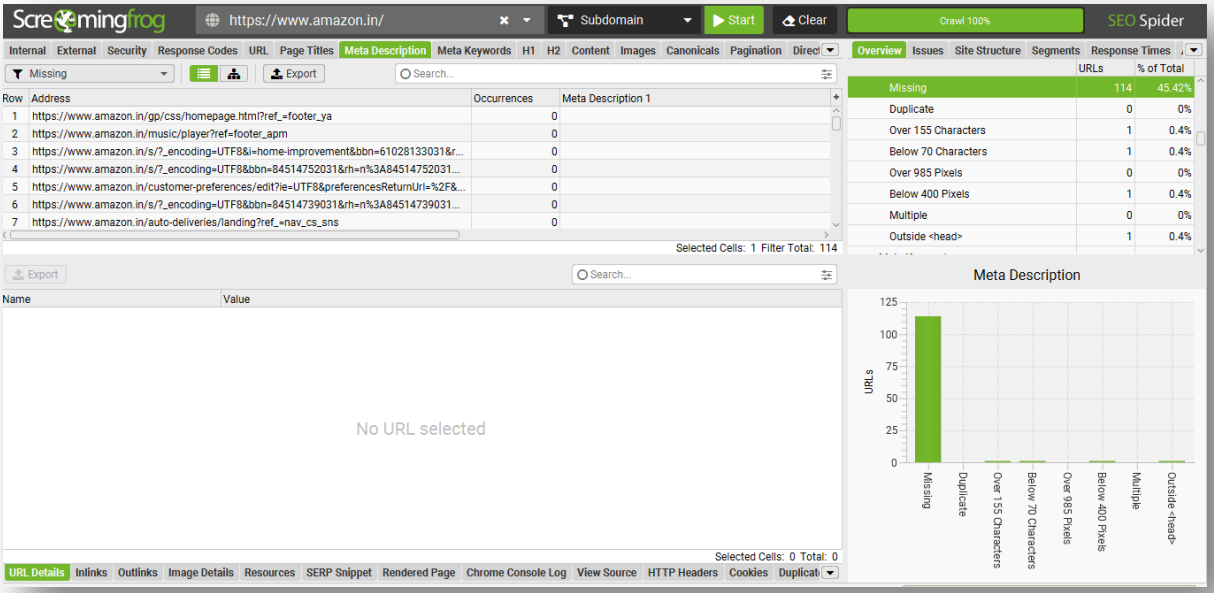

1. Broken Links – Highest Priority

2. Duplicate Titles – High Priority

3. Missing Meta Descriptions – Medium Priority

---

4. One-Page SEO Audit Report – Music Streaming Website

SEO Audit Report – Music Streaming Website

Website Audited: Example music streaming website Spotify
Audit Focus: Technical SEO, crawlability, performance and on-page optimization

Main Findings

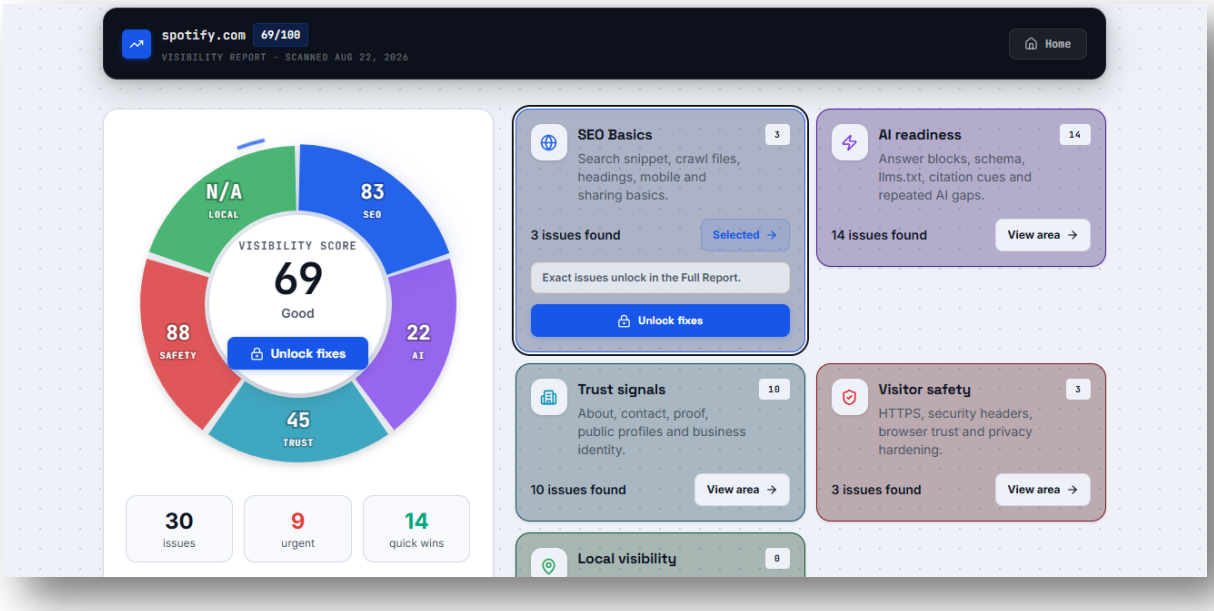

SEO Issue	Impact	Recommended Fix
Duplicate page titles	Search engines may have difficulty distinguishing similar artist, album and playlist pages.	Create unique title tags using the artist, album, song or playlist name.
Missing/weak meta descriptions	Search snippets may provide poor information to potential visitors.	Add unique and relevant meta descriptions to important indexable pages.
Broken internal links	Users and crawlers may reach 404 pages, reducing usability and crawl efficiency.	Identify broken URLs and replace them with valid destinations or relevant redirects.
Slow page performance	Slow pages can negatively affect user experience and performance signals.	Compress images, reduce unnecessary JavaScript/CSS and improve Core Web Vitals.
Duplicate or poorly controlled URLs	Similar pages can compete with	Use canonical URLs and appropriate

	each other and create indexing problems.	indexing controls.

Conclusion

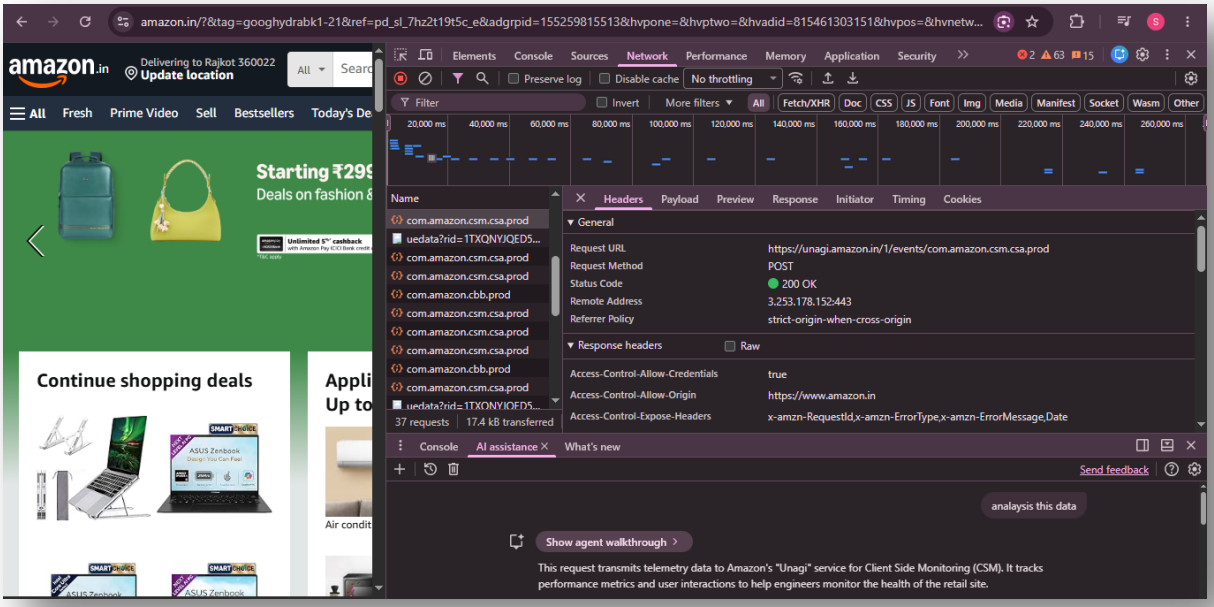

The most important improvements should focus on **broken links, duplicate URLs/titles and page performance**. Fixing these issues can improve crawlability, user experience and the ability of search engines to understand and index important music, artist and playlist pages.

A technical audit should be repeated after fixes to confirm that the problems have been resolved.

---

5. Web Server Log Analysis Using AI

The `/products/missing-product` request returning **404** is a genuine crawl/error issue that should be investigated because it may indicate a broken or outdated URL.

The requests for `/admin/login`, `/wp-admin/`, and `/.env` are unusual for a normal visitor and could indicate automated probing for commonly exposed administrative or configuration files. They should be monitored and, where appropriate, blocked or protected.

For larger websites, log-file analysis is useful for understanding how search-engine crawlers interact with a site and for identifying crawl-budget and bot-activity patterns.
